Board decision brief · Version 17.0 Revision 1

School Safety: Specific Threats, Measurable Countermeasures

Defensive readiness without compromising constitutional rights or public trust

Publication 17.0 Revision 1. Editorial corrections and verifiable advisory reasoning; independent acceptance and site validation remain pending.

Approve a scenario-based qualification program, not a technology shopping list. Assess credible threats to students, protect lawful ownership, and fund only controls that demonstrate a protective purpose and do not create unacceptable new hazards.

> **First and Second Amendment safeguards.** Protect lawful expression, religious exercise, peaceful assembly, association, petitions and lawful firearm ownership. Political viewpoint, criticism of officials, lawful advocacy and lawful ownership alone must not trigger threat labels, surveillance or adverse action. Require corroborated conduct, documented legal authority, independent human review and an accessible correction/appeal route.

Five immediate decisions

1. **Require a traceable threat register.** Give every concern an observable condition, independent corroboration, response authority, outcome metric and sunset criterion.
2. **Support voluntary secure storage.** Offer families storage education and equipment referrals without collecting firearm-owner identities.
3. **Verify initial-minutes protective capability.** Independently exercise alerts, classroom egress, accessible communications, bleeding control, and dispatch coordination.
4. **Separate established controls from exploratory technology.** Permit small offline pilots of sensors, canines and AI, but do not equate promising capabilities with verified reductions in shooting casualties.
5. **Make G0 governance non-waivable.** Set clear legal authority, restrictions on sharing student records, independent complaint review, and penalties for retaliatory or selective use.

Sample trace from specific threat to mitigation

Condition	Protective response	Independent test
Accessible household firearm	Voluntary locked-storage education and storage referrals	Anonymous caregiver comprehension and adoption audit
Corroborated violent threat	Multidisciplinary behavioral case review and proportionate intervention	Synthetic case assessment, appeal and false-escalation review
Compromised alert or door system	Manual fallback and cyber-physical isolation	Controlled outage and alarm provenance exercise
Critical injury before EMS	Bleeding-control readiness and trained responders	Competency demonstration and equipment inventory
Law enforcement or AI overreach	No automated force/labeling; independent legal and privacy oversight	Rights-impact review and complaint remediation drill

> **Deployment rule:** Zero tolerance for illegal authority, blocked egress, unreviewed force decisions or disclosure of student records outside lawful purpose. Automated publication QA does not equal live-site qualification.

Public research issue, 26 October 2026. Companion registers: 18 illustrative threat scenarios, 15 control families and five qualification gates. Board counsel, AHJ, first responders, families and disability representatives must review deployment-specific changes.
