Implementation playbook · Version 17.0 Revision 1

90-Day Threat-to-Control Qualification Pilot

Designed for evidence generation, not automatic operational certification

Publication 17.0 Revision 1. Editorial corrections and verifiable advisory reasoning; independent acceptance and site validation remain pending.

First and Second Amendment safeguards. Protect lawful expression, religious exercise, peaceful assembly, association, petitions and lawful firearm ownership. Political viewpoint, criticism of officials, lawful advocacy and lawful ownership alone must not trigger threat labels, surveillance or adverse action. Require corroborated conduct, documented legal authority, independent human review and an accessible correction/appeal route.

Day 0 — Establish decision rights

Board sponsor designates incident commander, threat assessment chair, legal/privacy authority, fire/building AHJ liaison, disability-access coordinator, EMS liaison and independent evaluator. All participants sign a minimum-necessary information protocol. Secure records remain separate from voluntary safe-storage participation.

Window	Delivery milestones	Artifacts and acceptance
Days 1–15	Select three representative, non-sensitive scenarios; approve scope and legal/data maps	RACI, source register, test approvals, disability access and disclosure rules
Days 16–30	Baseline alerts, egress, medical supplies, staff roles and voluntary storage outreach	Evidence gaps with no imagined capability scores; maintenance and training records
Days 31–45	Run table-top exercises for corroborated threat vs malicious tip and accessible communications	Timed decision logs; documented corrections and civil-rights review
Days 46–60	Run qualified non-weapon drills for power loss, false sensor alarm, door accessibility and EMS handoff	Independent measurements, near misses, fail-safe release validation
Days 61–75	Evaluate cyber-physical and AI proposals in isolated lab settings only	Vendor assurance, penetration test scope, model metrics and safety impact dossier
Days 76–90	Review evidence against pre-registered criteria; fund, remediate, pilot or discontinue	Signed decision record, aggregate public summary and next-cycle threat review

Ownership and safety review

Use one accountable owner per control. Required co-approvers for high-consequence changes are the district incident command, qualified fire/AHJ reviewer where applicable, accessibility lead, privacy counsel, independent evaluator and, for police operations, the authorized law-enforcement agency. Community participation and an independent complaint channel are mandatory for legitimacy.

Qualification gates

1. **Necessity:** why this threat is materially relevant and baseline safeguards insufficient.
2. **Safety:** no egress trapping, unacceptable false alarms, added injury, or unmeasured cascading behavior.
3. **Rights:** documented legal basis, no ownership registry, no ideological targeting or coercion, records purpose restrictions.
4. **Cyber:** verified vendor update chain, segmentation and safe manual recovery.
5. **Independent evidence:** test logs reproducible and decision signed by parties not financially dependent on selected vendor.

> **Mandatory STOP:** unqualified armed activity, a proposed automatic use-of-force feature, unapproved student surveillance, an egress-related critical defect, unlawful sharing of education records, or any request to publish exploitable site details.

Metrics dashboard

Report validated risk-reduction proxies: opt-in uptake and comprehension; false-report escalation and correction; alert reach and latency distributions; successful accessible evacuation/egress checks; kit and skills readiness; cyber restoration outcomes; completed case reviews; community complaints and their resolution. Do not infer casualty reduction from pilot proxies alone.

Deliverable at day 90

An independent acceptance memo records for each scenario: **approve low-risk measure / fund corrective action / limit to offline pilot / suspend or reject**. Maintain a future review cadence driven by emerging threat evidence and control failures, not a calendar purchase quota.
