INDEPENDENT SCHOOL SAFETY ANALYSIS / WASHINGTON K–12Version 17.0 Revision 1

SYSTEMS-BASED SECURITY REFERENCE

SCHOOL SAFETY & LAYERED THREAT MITIGATION

GOVERNING-BOARD DECISIONS · OPERATIONAL PROTECTION · FIELD ASSURANCE

A defense-in-depth policy and operational guide for Washington K–12 schools, integrating prevention, protective action, technology assurance, legal compliance and official-source research. Includes threat-driven technology adoption, continuous testing, cyber-physical safety assurance and constitutional safeguards (V17.0).

Independent school-safety research. Not issued or endorsed by CISA or any U.S. Government agency.

BOARD-LEVEL BRIEF / WASHINGTON K–12Version 17.0 Revision 1

Executive summary

A credible school-shooting prevention program starts before a weapon reaches campus: restrict unauthorized youth access to firearms, assess concerning behavior fairly, protect occupants immediately and deliver lifesaving care while responders are en route.

GOVERNING PLANNING STANDARD

Do not assume outside responders arrive within five minutes. Protect students before an incident by reducing access to unsecured firearms; during a credible incident, initiate safe, accessible protective and medical actions without waiting for external aid.

01 Prevent firearm access

Provide universal safe-storage education, optional locks and equipment vouchers, and lawful temporary-storage referrals. Keep firearms unloaded and locked with ammunition separately secured. Do not collect household ownership lists.

02 Verify threats without profiling

Use multidisciplinary behavioral assessment and trusted reporting. Corroborate allegations, separate urgency from culpability, and coordinate lawful intervention when credible danger exists.

03 Protect and treat in the first minutes

Test accessible alerts, safe shelter or evacuation, emergency access, backup communications and trauma response. Meet Washington bleeding-control equipment, training and inspection duties.

04 Prove results and partner responsibly

Authorize a 90-day program with schools, families, firearm owners, retailers, healthcare and law enforcement. Use privacy-protective metrics, independent evaluation and transparent corrective actions.

Decision requested from district leadership

Technology modernization · mandatory cybersecurity gate

Prioritize protective technology only when established or credibly emerging threats expose a documented gap; experiment early but never deploy unverified. Attacker and defender methods can adapt rapidly; every trial therefore requires a repeatable cycle of evaluation, challenge, hardening, limited pilot, monitoring, and revision. Every connected safety technology - cameras, sensors, alarms, door controllers, communications, cloud consoles and AI models - may be compromised. Cybersecurity is a top-level life-safety function, and cyber failure must never create confinement, loss of free egress, autonomous force, or uncontrolled student surveillance.

V17.0 / proposed policy and engineering requirements; no campus certification. Sources: NIST CSF 2.0, NIST SP 800-82r3, CISA K-12 guidance, NIST SSDF 1.1.

Authorize a 90-day ASCS-00/01–04 prevention and prearrival protection pilot: name owners, establish voluntary partnerships, audit egress-safe barriers and alerting, independently assess canine and qualified responder proposals, remediate mandatory safety gaps and measure first-minutes performance.

Evidence standard: documented → inspected → exercised → independently verified. **Rights and legitimacy:** respect constitutional protections, student privacy, individualized due process, and legal limits on force and surveillance. Neither an accusation nor an AI alert is a finding of wrongdoing. **Current readiness:** unassessed.

COURTESY OF NERVOSYS, LLC · DR. ADAM ERICKSONhttps://nervosys.ai02

Rights and public trust: Every ASCS subsystem must satisfy the G0 legality, non-retaliation, data-minimization and independent-accountability gates before deployment. Lawful ownership or political expression alone is never a credible threat indicator.

Implementation at a glance

A practical decision sequence for school boards, superintendents, and safety teams. Prioritize protections that operate before outside help arrives; require independent evidence before claiming readiness.

P0 / FIRST 30 DAYS

Protect life immediately

Verify accessible alerts, egress and shelter options, dispatch contacts, bleeding-control compliance, and trauma-response coverage. Record every critical deficiency with an owner and interim measure.

P1 / BY DAY 90

Demonstrate functionality

Test classrooms, portable buildings, outdoor activities, transportation, accessibility, and communications outages. Collect timed results from authorized, independently witnessed exercises.

P2 / CONDITIONAL

Approve specialized systems

Screening, AI cameras, armed personnel, canines, and counter-UxS require a site-specific gap, legal authority, evaluation of adverse effects, and demonstrated protective benefit.

Evidence ladder — procurement is not proof of readiness

01
Documented

02
Inspected

03
Exercised

04
Independently verified

NO OFFSETTING CRITICAL FAILURE. A blocked accessible exit, failed emergency warning, unaddressed serious safeguarding gap, or other life-safety defect cannot be concealed by a favorable average score. Maintain campus status as **NOT VALIDATED** until the specific deficiency is addressed and retested.

How this publication distinguishes authority

LAW	Constitutional, statutory, or regulatory requirement; verify applicability and current legal text.
GUIDANCE	Federal or state recommended practice; not independently a grant of search, surveillance, or force authority.
EVIDENCE	Research or independently observed performance; report limitations and uncertainty.

PROPOSAL	District policy choice requiring legal, community, and operational review.

This is an independent public research guide, not an official CISA publication or a campus assessment. Detailed configurations, sensor locations, and response arrangements belong in access-controlled district records.

DISTRICT LEADERSHIP / ADMINISTRATOR DELEGATION / PROPOSED POLICY

Administrator ownership and innovation mandate

Compliance is the floor. Effective protection is the objective. Principals and school administrators are expected to challenge assumptions, identify campus-specific hazards, and develop better means of protecting students and staff—not merely demonstrate that prescribed paperwork has been completed.

GOVERNING-BOARD DIRECTIVE Delegate responsibility, defined decision rights, protected time and resources to each campus safety lead. Require the leader to identify measurable safety gaps, invite staff and responder ideas, propose low-cost or novel solutions, test results safely, and report both successes and failures. Never penalize truthful reporting of weaknesses.

01 / Own the outcome

Name a campus owner for alert reach, protective actions, accessible egress, medical readiness and coordination. Give that owner resources, a district sponsor and a method to escalate urgent barriers.

02 / Challenge the baseline

Compare the school's documented procedures against observed performance. Invite ideas from educators, students, families, custodial staff, disability specialists and first responders without assuming any group knows every failure mode.

03 / Pilot responsibly

Start with reversible, low-risk improvements: clearer warning instructions, redundant communications, accessible signage, better handoffs, substitute-staff orientation and trauma-care access. Obtain required district and partner approvals before live tests.

04 / Prove and share

State a measurable hypothesis; record baseline, benefits, missed alerts, delay and unintended harms; use independent witnesses; then adopt, revise or stop. Share proven practices across schools while withholding sensitive layouts and vulnerabilities.

Administrator-led improvement cycle

FIND GAPDESIGN OPTIONAUTHORIZE PILOTMEASURESCALE OR STOP

Limits and accountability Innovation does not waive federal or Washington law, fire/ADA obligations, student privacy, constitutional rights, due process or collective agreements. No administrator may unilaterally authorize weapons, force, drone interdiction, invasive surveillance, unsafe drills or other restricted activities. The district must fund oversight and expedite lawful review rather than shift responsibility without authority.

Board oversight: quarterly campus improvement reviews; a written decision on unresolved high-risk gaps; protected escalation for principals; evidence of measured results; and review of discontinued or harmful pilots. This is a **proposed district leadership policy**, informed by CISA's site-adapted security guidance, USSS NTAC's adaptable prevention guidance, and RCW 28A.320.125; it is not an additional statutory mandate.

NATIONAL COLLABORATION / PROPOSED PROGRAM / VOLUNTARY FEDERAL ADVICE

National School Safety Innovation Forum

Local innovation should produce national learning. Establish a moderated, nationwide community of practice in which school administrators publish documented safety improvements, unsuccessful approaches, measured

tradeoffs, and lessons learned. Build on existing DOJ STOP School Violence technical-assistance and peer-learning work rather than duplicating it.

GOVERNANCE RECOMMENDATION **School-led, federally advised, independently evaluated.** Invite federal agencies to review technical methods and issue nonbinding recommendations. School districts retain legal authority for campus decisions; agency participation and sponsorship require formal agreement and do not imply federal certification.

01 / Network and access

Provide verified membership for public, Tribal, territorial, charter and private school leaders; include rural and urban districts, educators, families, accessibility specialists, responders and researchers. Offer moderated discussion, regional peer groups, quarterly workshops and an annual evidence review.

02 / Federal technical review

Request CISA advice on physical and cyber protection; USSS NTAC on behavioral threat assessment; DOJ BJA/NIJ on evaluations and replication; Education on student privacy and civil rights; and FEMA on exercises. Involve state education and safety agencies, including Washington OSPI.

03 / Evidence-based case library

Use a standard entry: problem, setting, countermeasure, lawful approvals, baseline, cost, implementation limits, test methods, outcomes, adverse effects and reproducibility. Label *proposed*, *locally tested*, *independently replicated* or *not recommended*. Publish useful failures as well as successes.

04 / Security, rights and trust

Separate public summaries from tightly restricted professional materials. Exclude identifiable student records, live incidents, floor plans, sensor gaps, armed-staff deployments and exploitable vulnerabilities. Require moderation, independent conflict-of-interest declarations, privacy review, correction and appeal procedures.

RECOMMENDED SHARING WORKFLOW

SubmitScreenFederal / peer reviewEvaluatePublish / replicate

Launch proposal: Convene a 90-day charter group; invite written agency recommendations; pilot a secure case library and administrator peer-review program within six months; publish an annual public findings report and a restricted practitioner supplement. Measure independently verified improvements, adoption, cost, safety incidents and unintended effects—not message volume or product sales.

Basis: DOJ BJA STOP TTA (2023): communities of practice and dissemination; DOJ STOP School Violence Program; CISA K–12 School Security Guide (2022); USSS NTAC (2018). This forum is proposed, not an existing federally approved program.

Courtesy of NERVOSYS, LLCContact: Dr. Adam Erickson

BOARD ACTION / CONTROL ASSURANCE

Readiness release decision sheet

Use at district review gates and after a material campus change. **Readiness is a scoped finding, not a general certification.** Record the exact campus, buildings, people, operating conditions, reviewer and test date in a restricted evidence packet; report findings and decisions at board level without publishing sensitive vulnerabilities.

01 / LEGAL BASELINE

Prove mandatory duties

Verify drills, accessible procedures, bleeding-control coverage, emergency-response agreements, training and privacy duties. Cite the governing rule and current record.

02 / REACH

Reach every occupied setting

Demonstrate warnings and protective instructions in classrooms, outdoor programs, transport and accessible scenarios; document measured coverage and fallback.

03 / PROTECTION

Demonstrate immediate action

Observe safe protective decisions, egress, shelter and accountability before outside responders arrive; record event times from one defined time origin.

04 / MEDICAL

Prove lifesaving readiness

Inspect required supplies and staffing, then observe a safe simulated traumatic-injury response and timely EMS coordination.

05 / INTEROPERABILITY

Confirm first-responder handoff

Confirm dispatch verification, backup communications, scene information sharing and command transfer with the participating agencies.

06 / ASSURANCE

Independently review limitations

Document misses, false alerts, accessibility gaps, maintenance needs and corrective actions; retest before claiming closure.

Decision outcomes

NOT ASSESSED — evidence is absent or testing was not authorized. **CONDITIONAL** — a defined protective function was demonstrated, but material limitations remain. **VERIFIED IN SCOPE** — the specified capability, conditions and evidence were independently accepted. **CRITICAL FAILURE** — do not describe the campus as ready; apply interim protective measures and retest.

Decision ownership: district executive and campus lead. Technical review: independent evaluator, fire/EMS, dispatch, law enforcement and district counsel as applicable. Never average away blocked egress, a failed accessible warning or a required statutory control. The scorecard is a **proposed governance aid**, not a new legal standard or federal certification.

How to read this document

- **Executive decisions and core countermeasures:** Sections 1–10; recommended actions and evidence obligations.
- **Campus field protocol:** Section 11; authorization, safe sampling, evidence levels and independent review.
- **Operational reference registers:** Sections 12–15; all 56 vector entries, 15 candidate capabilities, Washington compliance requirements and field sampling.
- **Annotated research bibliography:** Section 16; official federal, state, constitutional and regulatory sources with links and limitations.

Authority key: LAW = binding law; **GUIDANCE** = nonbinding agency advice; **RESEARCH** = empirical/descriptive evidence; **WARNING** = agency warning, not local verification; **PROPOSAL** = district option requiring review and testing.

1. Executive decisions and immediate priorities

Decision requested

Empower every campus principal to own protective outcomes and propose safe, measurable improvements beyond mandated minimums. Grant time, resources, decision rights and a fast district review path. Approve a 90-day districtwide baseline program with one accountable owner, campus-level inspections, independently witnessed *in-scope* demonstrations of life-safety capability, documented interagency coordination, and independently verified closure of critical deficiencies. Require a campus-specific evidence packet and a governing-board exception report at days 30, 60, and 90; aggregate dashboards may not conceal any open life-safety finding. Do **not** authorize major advanced screening, AI, counter-UxS, canine or armed-personnel procurements based on demonstrations or marketing claims alone. Apply a common test: **specific hazard → protective purpose → legal basis → reliable detection/response → measured performance → unintended harm → fallback**. [F01] [F07] [W01]

Priority gates: protect people first

Priority	Required decision or capability	Minimum completion evidence
P0 · immediate	Emergency warning and backup channels; clear evacuation/lockdown/shelter choices; working egress/access controls	Timed, accessible tests including buses, fields and after-hours activities; deficiencies owned and dated
P0 · immediate	Washington bleeding-control compliance; first-aid/ AED/EMS interface	Verified kits, employee training coverage and annual/post-use inventories under RCW 28A.210.440
P0 · immediate	PSAP, fire/EMS and police coordination; incident leadership and reunification	Current contacts, joint review, responder access arrangements and documented functional exercises
P0 · immediate	Behavioral reporting, triage and student safeguarding	Multidisciplinary case-management team, follow-up procedures, privacy and malicious-report controls
P1 · near term	Entry screening, targeted cameras, cybersecurity and identity protection	Site-specific gap analysis and measured reliability, false positives, accessibility and privacy
P2 · conditional	Authorized protective personnel, detection canines, counter-UxS specialists	Independent legal authorization, evidence-based benefit, qualification and exercise validation

Compliance note. Washington's *safe school plan* and emergency-response-system statutes are binding, and bleeding-control readiness became a specific statutory requirement beginning in the 2026–27 school year. Reconcile district policy and evidence with RCW 28A.320.125, .126 and 28A.210.440. [W01–W03]

Compliance details administrators must not miss

- **Drills and documentation — LAW.** RCW 28A.320.125 calls for at least one safety-related drill per month **while school is in session with students**, covering shelter-in-place, lockdown and evacuation functional responses; it also requires drill date, time and type to be recorded, relevant earthquake and mapped-hazard exercises, and age-appropriate, trauma-informed lockdown drills.
- **Principal incident command — LAW.** The safe school plan must require the building principal to be certified on the incident command system. Check substitutes, staff with accessibility needs, and students at off-site events. [W01]
- **Response system — LAW.** RCW 28A.320.126 requires district collaboration with local law enforcement, public safety answering points and safety/security staff to develop a qualifying emergency response system. The statute specifies **at least one** listed response-system capability; it does not require each school to buy every listed product. The statutory progress-report deadline was October 1, 2025: audit submissions and existing implementation, not a fictional new 2026 deadline. [W02]
- **Bleeding control — LAW.** Verify each campus's physical equipment, required contents, trained-staff coverage and inspection records individually. A district purchase order is not evidence of campus compliance. [W03]

Decision rule: a safety control with an uninspected site, expired training, unknown backup performance or missing records remains **UNASSESSED** or **NONCOMPLIANT**, not 'operational' merely because a policy or equipment inventory exists.

Legal compliance is a separate gate from operational effectiveness

LAW / implementation interpretation. Verify legal duties individually. A successful alert test does not prove that monthly drills were documented; a purchased bleeding-control kit does not establish statutory contents, training or inspections; and an effective security officer does not cure a missing annual agreement. RCW 28A.320.125 requires safe school plans, accessibility and reunification provisions, principal incident-command certification, staff/temporary-worker communications, and monthly drills when students are in session. RCW 28A.320.126 requires an emergency response system developed with law enforcement, PSAPs and safety/security staff; a single qualifying statutory technology can satisfy the listed-system element, but the district must still demonstrate the full coordination requirement. RCW 28A.210.440 applies for the 2026–27 year and specifies equipment contents, staff coverage and annual/after-use inspections. [W01–W03]

Security staffing and records. Where the district deploys safety/security personnel, RCW 28A.320.124 requires a duties/complaints policy; RCW 28A.320.1242 requires annual adoption of applicable provider agreements with training and community involvement; RCW 28A.320.1241 requires specific yearly collection/submission of staffing, force-related incidents and complaints. Verify each provision rather than inferring authority or readiness from a contract alone. [W06–W08]

Privacy and student allegations. School-based threat assessment must concern individual behavior and context rather than demographic profiling. When FERPA's health/safety emergency exception is used to disclose protected educational records, log the articulable and significant threat and disclosure recipients. Urgent precautionary protection is distinct from an adjudicated disciplinary finding. [W04–W05] [F25]

For an inspectable baseline, use the accompanying **statutory compliance matrix**, recording campus, obligation, evidence location, authorized reviewer, gap, interim measure and retest date. An unassessed statutory obligation must be escalated; it must not be marked compliant or treated as proof of a violation without fact gathering.

Decision gate: no critical gap can be averaged away

PROPOSAL. Treat any verified failure of an accessible emergency-warning route, required egress, campus bleeding-control coverage, life-safety communications fallback, or an applicable mandatory school plan as a **critical open finding**. A favorable overall score does not offset it. Assign a responsible owner, an interim protective measure, a repair date, and independent retest. When evidence is absent, mark **UNASSESSED**, not failed or passed.

Approval sequence: identify site risk and legal requirements; verify the existing baseline; correct P0 failures; perform controlled exercises; quantify residual deficiencies; only then consider advanced screening, AI analytics, armed staffing, working canines or counter-UxS procurement. This sequence prioritizes physical protection, not the volume of technology purchased. [F01] [F07] [W01–W03]

Acceptance logic: what must be true before a campus is called ready

PROPOSAL — board-adopted assurance standard, not a statutory certification. For each campus and time period (school hours, extracurricular events, transport, summer programs), evaluate *coverage* separately from *equipment condition*. A districtwide system can be functional while a portable classroom, athletic field, bus route, or accessible entrance remains unprotected.

Use the decision sequence **applicable → assigned → inspected → exercised → independently corroborated → sustained**. A control may be reported as *locally demonstrated* only when a named evaluator has documented its operating conditions, participant accessibility, test outcome and next retest. Do not use an average score to close an emergency-alert failure, impaired egress, unavailable required medical resources, or other critical deficiency. Record unavailable evidence as **UNASSESSED**, not as zero risk or compliance. This is an added district policy, not a statutory declaration of campus readiness. [F01] [F07] [F24] [F29]

Minimum evidence bundle for each control: campus identifier; relevant buildings and activities; accountable owner; legal basis; risk addressed; test script/version; date and witness; quantitative observations where meaningful; accessible alternatives; whether normal services were disrupted; actual-versus-expected result; privacy/discipline collateral effects; corrective-action ticket; and retest/expiry date. Maintain operational diagrams and sensitive security configurations in restricted local records rather than the board-facing report.

Assurance decision	Sufficient basis	What it does **not** establish
Not assessed	Evidence absent, expired, or outside test scope	Does not mean an imminent threat exists
Installed, not proven	Inventory or physical inspection only	Does not establish alerts reach occupants or staff can respond
Demonstrated with limitations	Controlled, witnessed exercise within stated settings	Does not generalize to power loss, weekends or every disability accommodation
Verified for defined scope	Repeatable field exercise or suitable incident evidence, with independent review and active maintenance	Does not predict every real-world attack or certify an entire district
Critical failure	Mandatory life-safety provision absent or a necessary barrier demonstrably fails	Cannot be averaged away; interim protection and follow-up required

Sampling rule: test the *hardest representative conditions*, not only the easiest demonstration—e.g., a classroom far from main administration, a noisy assembly, an accessible alternative route, a school bus, and a case with degraded IT or power. Expand the sample where buildings, populations or equipment configurations differ materially. Never test an actual emergency by dispatching false alerts or obstructing life-safety functions. FEMA's HSEEP exercise framework supports objective-based evaluation followed by an After-Action Report/Improvement Plan (AAR/IP). [F29]

The school safety operating concept

1. **Prevent:** intervene on credible behavior and support vulnerable students; reduce access and cyber vulnerabilities.
2. **Detect and verify:** observe hazards using people and appropriately tested sensors; corroborate without delaying protection.
3. **Protect:** communicate, separate from danger, shelter or evacuate as appropriate, preserve accessible egress.
4. **Respond:** qualified personnel act strictly within authority; school staff account for people and render feasible first aid; coordinate with police/fire/EMS.
5. **Recover and learn:** reunify families, support victims, preserve records, independently review errors, close deficiencies, revise plans. [F01] [F07] [F10]

2. Threat model and decision logic

CISA’s 2022 K–12 School Security Guide addresses **crime and violence**, not every natural or public-health hazard; pair it with federal emergency-operations-planning guidance for all-hazards coverage. [F01] [F07]

The **56-vector companion register** remains the detailed hazard index; its scenarios are not incident-frequency estimates. Use seven broad groups to avoid a brittle list of purportedly exhaustive attacks. Each local campus assigns severity, plausible exposure, vulnerable populations, protective controls, decision owner and validation status. [F01] [F07]

Threat family	Representative examples	Defensive planning response
Targeted violence	Firearms, edged weapons, explosives, arson, vehicle incursion, unauthorized entry, attacks during transit or events	Access controls, location-appropriate protection, rapid notification, qualified response, hemorrhage control
Information, cyber and deception	Swatting, forged allegations, credential compromise, extortion, cyberbullying, AI-generated harassment, ransomware	Source authentication, PSAP coordination, child protection, backups, evidence provenance and fair investigation

Threat family	Representative examples	Defensive planning response
Targeted coercion and abduction	Custody disputes, luring, virtual kidnapping, trafficking, foreign-state intimidation, organized criminal recruitment	Verified release and custody protocols, welfare checks, safe disclosures, specialist referrals, victim services
Environmental and medical	Wildfire/smoke, earthquake, severe weather, hazmat exposure, epidemic, medical mass casualty	Hazard-specific shelter/evacuation, air systems, supplies, EMS interface, continuity
Unmanned systems and animals	Unexpected UAS/UGV presence, hazardous drone activity, aggressive dogs, specialized working canines	Safe observation, indoor protection, specialist coordination, lawful mitigation and ADA-conscious handling
Infrastructure and transport	Power/IT failure, water failure, communications outage, bus disruption, supply-chain outage	Redundant channels, alternative locations, manual modes, continuity and alternate transport
Compound and unknown	False alert masking a genuine event, cyber-physical disruption, previously unclassified method	Multiple independent observations, flexible incident command, escalation pathways, register update

Assurance-case method for all 56 threat vectors

For **each vector** in the companion data register, document: (1) the observed hazard or credible warning; (2) the control IDs meant to prevent, detect, protect or recover; (3) required evidence; (4) the named school/district owner; (5) whether all students and locations can benefit; (6) failure interactions with other hazards; and (7) a retest date. The companion **threat-to-control crosswalk** provides a first-pass mapping. Consolidated Edition 12.0 adds a field-test plan that separates measured campus coverage from mere equipment presence. It is a *proposed assessment map*, not proof of local applicability or control effectiveness.

A school may face a severe harm mechanism with little incidence evidence. In that case, evaluate whether existing measures already mitigate it before introducing a dedicated sensor or tactic. Conversely, recurrent low-tech failures—unreachable emergency messaging, unsecured releases, misconfigured access doors—deserve remediation even if no sensational incident triggered concern. [F01] [F07]

Campus prioritization: avoid false precision

Assess each campus by **credible exposure, vulnerability of occupants, likely consequence, protective capability, and confidence in the evidence**. Do not assign invented numerical probabilities to politically motivated attacks, advanced drones, or rare scenarios. Use four decision states:

State	Meaning	District action
Known statutory gap	Requirement is confirmed and required evidence is missing or fails inspection	Correct immediately; document interim protection and legal review
Measured protective deficiency	A controlled test or documented incident demonstrates an operational failure	Assign accountable owner, due date and retest
Plausible exposure, untested	Hazard could apply locally, but effectiveness or frequency is unknown	Assess site, use proportional interim measures, do not procure on assumptions
Emerging / not established locally	Government warning or hypothetical mechanism without local supporting evidence	Track updates and test existing defenses before adding technology

Record **source strength**, **local applicability**, **coverage gaps**, and **effect on other hazards**; for example, screening queues cannot impair fire egress or emergency reunification. [F01] [F24]

Prioritization without invented probability or compensating scores

PROPOSAL. Use a non-compensatory decision order: **(1) imminent protective deficiency; (2) binding legal duty; (3) demonstrable exposure and absence of backup; (4) effect on occupants with disabilities, transportation and off-hours activities; (5) evidence of a locally relevant threat; (6) cost, opportunity cost and testability.** An unknown likelihood must remain **UNKNOWN** rather than being filled with arbitrary numeric threat probabilities or sensational national incidents. CISA's school-security method is site-specific; federal targeted-violence cases and warnings do not provide a reliable probability of an event on a named campus. [F01–F04]

Require two independently assigned judgments: the **operations owner** documents present exposure and action; the **independent reviewer** checks the evidence and whether any residual critical gap remains. Human safety, nondiscrimination, accessible egress, and mandatory medical/communications requirements are **hard gates**, not weights in a total score. A proposed purchase must be compared with feasible lower-complexity alternatives, including staffing and procedural changes.

Evidence and action must run on separate tracks

Track A — immediate protection. When articulable circumstances indicate a credible immediate danger, an authorized leader may take a proportionate protective action while verification continues. Communicate uncertainty to dispatch and occupants; monitor reversibility and collateral risk. **Track B — findings and adverse actions.** Attribution, discipline, exclusion, public identification and criminal referral each demand their own lawful evidence, review and notice processes. An anonymous tip, AI alert, partisan accusation or screenshot is **not** proof of guilt. [F05] [F06] [F11] [W04] [W12–W14]

Use evidence labels **direct observation; independently corroborated; unverified; contradicted; adjudicated fabrication**. Preserve originals and access logs. Do not infer a knowingly false or malicious report merely because evidence was insufficient. Investigate credible indicators of manipulation, coordinated retaliation and impersonation without discouraging good-faith disclosures. [W05]

EDITORIAL CANDIDATE - INDEPENDENT ACCEPTANCE PENDING. This revision links targeted hazards to owners, evidence, rights, and suspension criteria. See the Threat Scenario and Countermeasure Engineering companion; signed site-specific acceptance records must be obtained separately.

G0 / ASCS systems assurance and release certification boundary

Executive decision statement

Release disposition: EDITORIAL CANDIDATE; INDEPENDENT ACCEPTANCE PENDING; OPERATIONAL DEPLOYMENT NOT CERTIFIED. Neither this report nor historical drills establish that a school is protected, compliant, or authorized to use a particular capability.

The specific hazard is a targeted firearm attack against a school, particularly in the interval before outside responders can intervene. The strategy combines upstream prevention, evidence-led reporting, fast verified warning, code-compliant protection, hemorrhage control, qualified externally governed professional response, recovery, and an independent constitutional-rights gate. It does not rely on a single technology, predicts no attacker behavior, and does not authorize tactical violence.

The terms “defense-grade” and “systems assurance” in this publication describe an engineering method: explicit requirements, hazards, traceability, adversarial testing, documentation, independent verification, change control and negative-result reporting. They do not claim endorsement by DoD, CISA, law enforcement or any accreditor.

Decision outcomes

Status	Meaning	Action
APPROVE DOCUMENTATION	Editorial, sources, reproducibility and privacy checks pass	Publish public package with limitations

Status	Meaning	Action
CONDITIONAL PILOT	Legal gate and pilot safety protocol approved; unresolved efficacy question	Restricted, supervised and reversible evaluation only
OPERATIONAL APPROVAL	Site-specific AHJ, legal, training, privacy, accessibility and performance reviews complete	Sign by distinct accountable district and external authorities
STOP / SUSPEND	Critical egress, authority, rights or safety test fails	Suspend feature; preserve evidence; retest after remediation

01 | System boundary and integrated architecture

Unit of analysis: a district program and one representative school for evaluation. Interfaces include caregivers, school personnel, emergency communications, local fire and EMS, dispatch, authorized law enforcement, trained specialists and independent reviewers. Home firearm choices are outside school enforcement authority except as lawfully determined in an individualized matter.

Layer	Principal inputs	Function / output	Primary dependency
G0 Governance	Constitution, statutes, FERPA, agreements, community oversight	Authorize or prohibit actions; protect complainants; audit disclosures	Independent reviewer / board
ASCS-00 Prevention	Opt-in household information, resources, private outreach	Reduce unauthorized access opportunities; connect voluntary support	Lawful ownership protections
ASCS-01 BTAM, detection and alerts	Credible human reports, accessible alert inputs, optional sensors	Qualified risk review, corroboration, protective notification	Staffed review; PSAP coordination
ASCS-02 Protective environment	Compliant doors, protective rooms, accessible routes	Delay exposure and preserve safe egress	Fire/building AHJ
ASCS-03 Specialist canine option	Certified handler, scoped training and policies	Potential narrow detection support; no general active-shooter claim	Independent empirical evidence
ASCS-04 Qualified professionals	Legal authority, contract, supervision	Emergency coordination and lawful professional intervention	Formal policy; force reporting
ASCS-05 Medical/recovery	Kits, training, casualty information, privacy controls	Immediate life support and family reunification	EMS and school nurses
ASCS-07 Verification	Approved test plans, anonymized logs, adverse events	Objective evidence, remediation, go/no-go	Independent assessor

Functional assurance logic

- An identified control must map to at least one defined hazard, one accountable owner, and one independently reviewable evidence artifact.
- A control can only claim a benefit supported by the kind of study performed: product bench test, site exercise, operational evaluation or evidence from real incidents are distinct.
- Failure of G0 legal authority, egress safety, medical minimums or basic communication cannot be averaged away by high performance elsewhere.
- Public release carries conceptual requirements and aggregate results; campus-specific access, sensors, operational placement, case files and response tactics require separate restricted governance.

02 | Threat definition, uncertainty and risk method

Mass-shooting hazard families considered: preventable firearm access; warning-sign leakage not acted on; attempted unauthorized entry; failure to recognize a credible threat; unsafe shelter and access controls; delayed medical assistance; misidentified responders or innocents; malicious reporting and rights violations. Other hazards such as fires and chemical releases remain essential competing life-safety constraints.

Risk is documented as severity, plausibility, exposure, controllability and strength of evidence. Do not assign pseudo-precise annual event probabilities from sparse local events. Extreme-severity/low-frequency incidents and false alarms must be evaluated separately. The hazard register includes negative consequences introduced by safeguards themselves.

Evidence state	Examples	Permitted claim
Unassessed	No reliable local evidence, or a vendor assertion only.	Planning and controlled evaluation only.
Documented	Policy, inventory, ownership, or training records exist.	Documented arrangements; protective function is not yet demonstrated.
Inspected	A qualified inspection checks condition and scope.	Observed condition within the inspection boundary.
Exercised within stated conditions	An authorized controlled test records outcomes, misses, and adverse effects.	Performance only under the declared test conditions.
Independently verified within stated scope	Independent reviewers corroborate repeatable tests or suitable operational records.	Accepted evidence for the named scope, with limits and revalidation triggers.

The states above describe control assurance, not the strength of a causal study. Bench, simulated, field, and multisite studies remain distinct study designs. Report the actual study design and uncertainty; do not translate inspection or exercise success into attacks or deaths prevented.

Representative public hazard register

ID	Hazard / consequence	Mapped controls	Verification / limit
H01	A child accesses a household firearm — Injury before campus defenses	ASCS00-01; ASCS00-02	Secure-storage support; caregiver education; lawful voluntary referrals; Participation and knowledge measures only, not assumed reduction in violence
H02	Threat leakage ignored or reporting chilled — Missed early prevention opportunity	ASCS01-01; G0-01	Anonymous and identified reporting with trusted human triage; Receipt and triage logs; reporter nonretaliation checks
H03	Malicious or fabricated allegation leads to coercion — Rights violation, harm, trust collapse	ASCS01-02; G0-02	Evidence provenance, corroboration, independent appeal; Blinded false-report scenario and audit trail
H04	Emergency alert fails during degraded networks — Delayed protective action	ASCS01-03	Independent manual channel and regular outage tests; Measured end-to-end alert latency distribution
H05	Classroom security interferes with emergency exit — Fire/medical secondary casualty	ASCS02-01; ASCS02-02	Fire-code approved hardware, free egress, accessible alternatives; Certified inspection and user demonstrations
H06	Sensor false detection causes harmful police action — Unnecessary force, panic, discriminatory impacts	ASCS01-02; ASCS04-01	Human verification; no algorithmic force authorization; Blind false-alarm trials and escalation audit

ID	Hazard / consequence	Mapped controls	Verification / limit
H07	Canine deployment causes search or injury concerns — Student harm and civil-rights violations	ASCS03-01; G0-01	Handler certification, narrow scope, trauma-informed review; Independent tests and incident/complaint records
H08	On-site armed response is mistaken or misdirected — Bystander casualties, responder confusion	ASCS04-01	Authority, credentials, coordination, oversight; Legal review, qualitative tabletop, incident reporting
H09	Medical kits or trained coverage absent — Preventable hemorrhage	ASCS05-01	Routine inventory, staffing redundancy and training; Inventory audit and structured skills testing
H10	FERPA data repurposed into intelligence — Privacy and trust erosion	G0-02	Purpose limitation, separate files, logged exceptions; Red-team unauthorized disclosure tests
H11	Single supplier/cyber failure impacts alarms — Common-mode breakdown	ASCS01-03; ASCS07-01	Vendor threat model, offline and manual options; Degraded-mode tabletop and configuration review
H12	Exercise inflicts harm or reveals campus vulnerabilities — Trauma, unauthorized disclosure	ASCS07-01; G0-01	No surprise simulations; safety officer; restricted annex; Prior exercise approvals and after-action findings

09 | Verification, validation and independent test protocol

Verification asks whether a specified control was implemented; **validation** asks whether it materially serves the actual intended safety outcome without causing unacceptable secondary harm. Neither a tabletop exercise nor a successful demo constitutes proof of reduced fatalities in rare events.

Stage	Activities	Artifacts / independence
0: Definition	Freeze controlled requirements, hazards, site boundary, participant protections	Approved test charter, site access list, counsel and fire review
1: Bench & desk	Documentary audit, manufacturer tests, cybersecurity and privacy review	Signed bill of controls and log of exceptions
2: No-threat functional	Simulated notifications, egress and safe medical supply tasks	Reproducible time stamps, observer notes, accessibility evidence
3: Degraded conditions	Authorized low-risk power/network/simulated sensor failure	Fallback and recovery demonstration; no actual outage inflicted
4: External audit	Independent reviewers reproduce select samples, adjudicate adverse effects	Nonconformance report and corrective action owners
5: Conditional operations	Temporary approved pilot with de-identified reporting	Periodic limits review and stop authority

Metrics and measurement boundaries

Metric	Collection	Interpretation and caveat
Alert delivery	Timestamped simulated initiation and receipt; p50/ p95/p99 distribution	Measure end-to-end by scenario, not a universal arrival guarantee
Detection quality	TP, FP, TN, FN on a blinded curated evaluation corpus	Report scenario-specific sensitivity, specificity and positive predictive value
Rights adherence	Proportion of cases with lawful basis and correct access logs	Audit all exceptions; one critical rights failure may stop program
Protection / egress	Inspection + representative usability tests	Must pass AHJ and accessibility sign-off

Metric	Collection	Interpretation and caveat
Medical readiness	Trained staffing, kit availability and replenishment	Compliance ≠ patient survival rate
Community trust	Opt-in anonymously reported participation; accessible complaints	Avoid mandatory surveys or linking identities
Canine option	Blind controlled tests, alert reasons, injury/ complaint events	Do not extrapolate to active-shooter interdiction
System availability	Test results across outages and manual mode	No untested single point of failure accepted

Illustrative statistical note: use Wilson binomial intervals or exact intervals for detection proportions and record sample-size limitations. Rare-event sensitivity requires carefully staged surrogate scenarios; observational safety outcomes cannot be estimated by multiplying performance numbers from incompatible studies.

10 | Countermeasure tradespace and procurement controls

Option	Potential benefit	Principal costs/risks	Evidence release gate
Storage counseling + vouchers	Addresses youth access before campus threat	Privacy trust; low uptake; uneven affordability	Verified education accuracy, anonymous uptake, vendor safeguards
Behavioral threat teams	Earlier review, intervention and supportive care	Bias, false accusations, record misuse	Documented case audits, fairness reviews, FERPA compliance
Redundant alerts	Quicker actionable notification	False alarms, accessibility and IT outages	Timed degraded-mode tests and human override
Code-approved door hardware	Exposure reduction while maintaining exit	Fire compliance, expense, maintenance	AHJ, ADA and safe egress acceptance
ML/acoustic systems	Potential additional automated cue	False positives; surveillance; vendor opacity	Independent local blind trials before pilot
Canine specialist service	Narrow optional screening	Uncertain effectiveness, injuries/trauma/search issues	Independent legal and efficacy trial
Qualified on-site officers/ security	Potential faster authorized human response	Force misuse, mistaken identification, liability	Explicit authority and independent governance
Bleeding-control readiness	Medical preparation independent of attacker timing	Training decay and kit gaps	Legal baseline, inventory and drills

Procurement must separate lifecycle expense (device, installation, recurring training, servicing, power/network redundancy, cyberpatching, litigation/insurance and evaluation) from hypothetical avoided casualties. Require a reversible pilot and source code/data portability where applicable. Proprietary technology must not evade independent privacy or accuracy testing.

11 | 90-day qualification and 12-month assurance program

Window	Program action	Completion / owner
Days 1–15	Charter, roles, public disclosures, scope, emergency escalation paths	Board lead + counsel establish gate G0
Days 16–30	Baseline evidence inventory, accessibility/fire review, threat-report flow; anonymized community program consultation	Facilities, principal, health/community leads
Days 31–45	Voluntary storage campaign and no-registration voucher pilot; legal temporary-storage referral review	Community partners and privacy officer

Window	Program action	Completion / owner
Days 46–60	No-threat alert/egress/medical controlled tests; canine concept review only if separately authorized	Fire/EMS/emergency lead + independent evaluator
Days 61–75	Degraded-mode tests, false-report red-team tabletop, rights and data audit	Independent assessor, FERPA officer, civil-rights liaison
Days 76–90	Issue signed nonconformance report, residual-risk decisions, revise MOU and remediation plan	Board / external reviewers; suspend failed controls
Quarterly, year 1	Refresh training, maintenance, access logs and safeguarding complaints; re-evaluate supplier changes	Control owners + independent reviewer
Annual	Review school-security agreements and required reporting, exercises, updated law and literature	District counsel, board and community participants

Approval signature matrix

Gate	Approver	Approval evidence
Legal and civil rights	District counsel + external civil-rights reviewer	Written scope and public complaint route
Fire/egress/ADA	Building/fire AHJ + disability access lead	Approved hardware and documented accessible function
Emergency / medical	911/EMS liaison and qualified school medical lead	Procedure and stocked readiness proof
Technology/cyber	CISO/privacy lead + independent assessor	Security/privacy test, vendor terms, failure tests
On-site professional force	Agency counsel/supervision and school board as applicable	Specific authorization and outside complaint/ force oversight
Public release	Technical editor + privacy reviewer + repository maintainer	Checklists and signed SHA-256 evidence

VERSION 17.0 REVISION 1 / CROSS-CUTTING G0 / RIGHTS + PUBLIC TRUST

G0 — Constitutional governance and anti-weaponization safeguards

Release principle: A protective capability is not operationally ready unless it has documented lawful authority, necessity, proportionality where applicable, privacy limits, non-retaliation, a complaint path and independent review. This standard applies to family prevention, threat intake, sensor alerts, security personnel, canine screening, intervention and post-incident investigations.

Two pathways that must not be conflated

Voluntary prevention and community services	Law-enforcement and coercive action
Open to all households; no compelled disclosure of firearm ownership, political beliefs or personal inventories. Anonymous safe-storage vouchers; separated vendor and school records.	Requires distinct legal authority and an individualized factual basis. Do not convert a safe-storage event, anonymous rumor or lawful speech into grounds for a search, detention or seizure.
Firearm retailers, clubs, caregivers and health practitioners may teach secure storage without sharing participant identities.	A police member of a FERPA-governed assessment team may not automatically repurpose student information for unrelated department intelligence.

Evidence, fair process and escalation

1. **Receive and safeguard:** Record exact concern, source, time and corroboration; allow anonymous good-faith reporting without treating anonymity as proof. Escalate imminent danger immediately using lawful emergency procedures.

2. **Assess observable conduct:** Distinguish threats, preparations, access, context, lawful expression and rumor. Explicitly prohibit sole reliance on viewpoint, protected identity, lawful ownership, disability status or peaceful advocacy.
3. **Assign independent decision rights:** School team manages education/safety matters; only appropriate authorities take coercive law-enforcement actions. Counsel or a designated legal reviewer signs off on nonemergency law-enforcement requests.
4. **Document the legal basis:** Preserve warrant, order, legally valid consent or specific exception when applicable; use the least intrusive lawful approach sufficient to address the risk. Rights reviews must not delay action against an immediate, credible threat to life.
5. **Offer review and correction:** Provide appropriate notice, opportunity to respond and record correction or appeal in nonemergency matters, without compromising active safety needs or legally protected investigations.

Separate oversight from the response chain

- Independent civilian review body with student, family, disability-access, civil-rights and lawful-owner representation; transparent selection, recusal and conflict-of-interest rules; no access to operational secrets beyond lawful need.
- Protected complaint reporting to the school, supplying agency/contractor, and independent external channels as jurisdiction allows. Preserve source records and audit trails; investigate retaliation allegations independently.
- Publish only aggregate counts, dispositions, false positives, unlawful-action findings, training completions, remedies and vendor costs. Suppress small cells and withhold sensitive student/campus data as required.
- Require annual agreement review with public participation and clear limits on SRO discipline functions; maintain separate records of security involvement with student discipline, arrests and use of force as required by Washington law.

Abuse-of-authority red flags — suspend and review

Concern	Immediate governance response
Political or ideological targeting; suppression of criticism or retaliation against a reporter	Preserve evidence, prevent involved decision-maker from adjudicating their own case, refer for independent assessment, document interim protection against retaliation.
Unlawful demand for firearm-owner lists or education records	Refuse unauthorized secondary release, log request, obtain counsel review, notify privacy officer and remediate attempted access.
Unapproved search, canine use, force, restraint or student discipline by security staff	Protect safety first, preserve relevant evidence, initiate proper complaint/agency process, suspend affected procedure pending safety review.
Unsubstantiated allegations or adversarial reports used without corroboration	Check provenance, permit good-faith reporting, require individualized assessment and corrections when supported.

Washington and federal basis: U.S. constitutional safeguards; WA Constitution Art. I §§ 3, 5, 7, 24; RCW 28A.320.124/.1241/.1242; RCW 10.120.020; FERPA threat-assessment guidance; WSCJTC officer-certification complaint procedures. This is model governance language, not a finding that a particular officer or agency has engaged in misconduct.

VERSION 17.0 REVISION 1 / ASCS-00 / UPSTREAM RISK REDUCTION

0. Youth firearm-access prevention and community partnerships

Prevent a child or adolescent from gaining unauthorized access to a firearm before a threat reaches a school. The operational goal is to reduce unsupervised access through secure storage, caregiver education, lawful intervention when warranted, and practical community assistance—not to maintain a list of firearm-owning families.

Evidence boundary. Secure storage is an established injury-prevention practice and can reduce unauthorized access; its effect on mass-shooting incidence specifically cannot be assumed or quantified from storage-program

distribution counts alone. Measure implementation and verified access outcomes separately from changes in rare violent incidents.

ASCS-00.1 / Household and vehicle access controls

Risk pathway	Recommended safeguard	Evidence to collect without personal registration
Unsupervised access inside a home	Store firearms unloaded in a locked safe or lockbox; store ammunition separately and securely. Keep keys, combinations and credentials inaccessible to children.	Anonymous pre/post knowledge and adoption surveys; aggregate voucher uptake
Access in a relative's or friend's home	Give caregivers a neutral conversation script to ask whether firearms are stored securely wherever children spend time. Do not request household inventories.	Voluntary survey of familiarity and use of the conversation checklist
Unattended firearms in vehicles	Discourage leaving firearms in unattended vehicles. Where transport or temporary storage is unavoidable, use lawful locked storage and prevent access by minors.	Educational reach and reported adoption, without asking for vehicle locations
Elevated short-term household risk	Offer voluntary off-site storage referral and individualized safety planning; emergency action belongs with qualified professionals and lawful authorities.	Number of referral resources validated; aggregated service availability

Implementation rule: a cable or trigger lock is an available option, but device suitability and theft resistance differ. Avoid presenting one device as adequate for every situation. The recommended standard is secured, unloaded firearms and separately secured ammunition. The program must never imply that concealing a firearm is equivalent to locking it. [CDC; WA DOH]

ASCS-00.2 / Voluntary community partnership architecture

Partner	Appropriate, bounded contribution	Safeguard
Firearm retailers, ranges and owner organizations	Practical storage demonstrations; discounts or vouchers; peer education tailored to common storage challenges	No access to student data; no marketing lists or ownership disclosures
County and municipal law enforcement	Safety education, voluntary lock events, accurate legal referrals and response to specific credible danger	Education is separate from investigations; information shared only on a lawful need-to-know basis
Pediatricians, healthcare and public health	Confidential, nonjudgmental storage counseling and crisis-risk referrals	Clinical information remains under applicable privacy rules and professional judgment
Schools, PTAs and family liaisons	Universal caregiver messages, translation, accessibility, resource distribution and optional events	No school-owned firearms register, household searches or mandatory ownership questionnaire
Manufacturers, donors and foundations	Subsidized devices, delivery support and arm's-length program evaluation	Disclose conflicts; ban donor use of participant information
Qualified voluntary-storage providers	Case-by-case off-site storage for a household choosing to reduce access temporarily	Call ahead; verify current capacity, eligibility, return process, costs and transfer law

Existing infrastructure: Washington Commerce's secure-storage program supports community education and device distribution, and the University of Washington maintains a voluntary storage locator. A listed provider is not a guaranteed reservation or endorsement. Contact providers in advance; never bring firearms unannounced to a school or law-enforcement facility.

ASCS-00.3 / Due process and credible-threat intervention

Provide an accessible reporting channel for observed threats and possible access to weapons. Trained, multidisciplinary reviewers distinguish **immediate protection decisions** from **unverified allegations**. Document objective behavior, corroboration, urgency, decisions, lawful authority, notification, appeal and case closure. Anonymous or AI-generated allegations alone must not create a finding of wrongdoing. When danger is imminent, call emergency services and follow approved protective procedures. Any firearm-related seizure, transfer or order requires applicable legal process and qualified decision-makers.

Family engagement: communicate safe-storage guidance to all families, not only those suspected of owning firearms. Respect protected rights and avoid coercive requests for ownership status. Information shared through independent healthcare or retailer programs must not be repurposed for student profiling.

ASCS-00.4 / Partnership governance and boundaries

- Use a signed memorandum of understanding identifying program goals, separate responsibilities, funding, insurance, procurement rules and program duration.
- Require data minimization, retention limits, no participant marketing, conflict-of-interest declarations, accessibility and translated materials.
- Public communications must distinguish binding law, professional guidance and optional, voluntary practices; partners must not claim official federal endorsement.
- Review devices for basic fitness, compatibility and usability; provide alternate devices for different family needs rather than a single branded solution.
- Develop referrals for lawful, voluntary temporary storage, explicitly confirming capacity and any return/transfer requirements before describing the service as available.

ASCS-00.5 / Ninety-day pilot and assurance

Period	District/community action	Acceptance evidence
Days 1–30	Appoint prevention lead; confirm legal/privacy review; invite broad stakeholder advisory group; select optional partners; establish anonymous baseline survey.	Signed charter, legal review, publication-safe stakeholder list and pilot plan
Days 31–60	Launch universal family guidance, multilingual materials, optional lock or voucher access, and a vetted voluntary-storage referral directory.	Materials tested for comprehension; partners trained; devices or vouchers available
Days 61–90	Measure delivery, training completion, uptake, knowledge and privacy incidents. Independently review program operations and publish aggregate lessons.	De-identified dashboard, corrective-action log and approve/modify/stop decision

Sample measures: number of schools participating; resource access by neighborhood; caregivers reached; device uptake (not device installations presumed); response time to reported imminent concerns; de-identified pre/post adoption rates; partner compliance; complaint and privacy incident rates. Do not use school-shooting incidence as a 90-day success metric or claim that distribution proves correct installation.

Washington legal distinction. RCW 9.41.360 specifies potential criminal liability for certain unsafe-storage outcomes, with exceptions, and expressly states that it does not mandate how or where a firearm must be stored. Washington Commerce identifies dealer secure-storage device offers and voluntary storage mechanisms under separate provisions. This advisory recommends prudent practices beyond minimum statutory requirements; district counsel should confirm current law and facts before advising on possession, transfers or court orders.

ASCS-00.6 / Sources and implementation references

1. Washington Legislature: RCW 9.41.360, Unsafe storage of a firearm.
2. Washington Department of Commerce: Safe Storage Program.
3. Washington Department of Health: Secure storage of firearms and ammunition.
4. CDC: Preventing firearm injury and death.

5. University of Washington: Washington State Safe Storage Map.
6. Washington Attorney General: Firearms safety and legal options.

PUBLIC POLICY RECOMMENDATION · Public resource only. No individual school has been assessed or certified under ASCS-00. Courtesy of NERVOSYS, LLC.

VERSION 17.0 REVISION 1 / ASCS-00 / RIGHTS-PRESERVING PREVENTION

ASCS-00A — Prevent youth firearm access while respecting lawful ownership

Safety objective: Prevent unsupervised access by minors and other unauthorized people without compiling an ownership registry, impeding lawful acquisition or possession, or requiring disclosure of household firearm ownership to a school. This is a voluntary prevention proposal; distinguish recommendations from laws.

Four practical access-control safeguards

1. **Physical control:** Encourage a quality secured safe or lockbox that fits the household, secured unloaded storage when not in use, and separately secured ammunition. A concealment location alone is not a safeguard. Where a household needs emergency access, require an individually assessed and independently tested solution that still prevents youth access—do not promise that a specific product is childproof.
2. **Credential discipline:** Keep combinations, backup keys, biometrics enrollment permissions and phone-based unlocking away from minors; audit access after a lost key, changed household access, or other material change.
3. **Vehicle and secondary residences:** Discourage leaving firearms unattended in vehicles or unsecured in homes visited by children; use lawful secure containment when temporary vehicle storage is unavoidable.
4. **Temporary separation during a crisis:** Offer an opt-in referral to qualified off-site storage providers or other lawful means-restriction options, with informed consent and verified transfer/return rules. Schools must not receive, transport or store firearms.

Voluntary implementation—no ownership registry

Recruit firearm retailers, ranges, owner organizations, safe manufacturers, pediatric providers, public-health offices, parent groups and law enforcement to provide universal safety education, equipment discounts and anonymous vouchers. Ensure that participation is offered to everyone; no purchase or redemption data identifying household ownership is transmitted to school administrators. Marketing use or sale of program data is prohibited by charter.

Preserve rights and trust: Support lawful firearm ownership and supervision; document statutory limits separately; avoid broad searches, compelled household inventories, profiling or punitive action based solely on ownership. Respond to a specific credible danger through individualized human threat assessment, lawful procedures and appropriate review. Privacy restrictions do not prevent immediate emergency reporting required by law.

Performance criteria

- Availability and cost of independently evaluated storage options and accessible lock programs.
- Optional anonymous pre/post knowledge and secure-storage adoption surveys; report ranges and uncertainty, not invented ownership counts.
- No student-identifiable firearm-inventory database; zero unauthorized vendor disclosures.
- Documented lawful procedures for responding to credible access threats, including privacy and due process.

Basis: CDC firearm injury prevention and secure-storage guidance; Washington RCW 9.41.360. The statute expressly states that it does not mandate how or where firearms are stored. Household guidance here is voluntary and is not a determination of individual legal duties.

VERSION 17.0 REVISION 1 / ASCS-01 TO ASCS-04 / FIRST-MINUTES ASSURANCE

ASCS-01 to 04 — Detect, protect, and respond before police arrive

Operating assumption: An emergency can unfold before outside police arrive. Organize protective capabilities as interconnected, tested safeguards. Do not treat an alarm, locked door, canine team, or armed staff presence as proof of safety. Document a human decision authority and a fallback when systems fail.

ASCS-01 / Multi-path threat detection and prompt alerting

- Primary signals: trusted human reporting, panic buttons, staffed cameras, access-control events and emergency calls. Compare optional acoustic gunshot detection, metal or weapons screening, and other analytic sensors using blinded tests and local conditions.
- Document detection rates, nuisance alarms, latency to human verification, alert delivery, inaccessible zones, equipment faults and vendor limitations. Do not claim cameras or AI can infer intent reliably from appearance or demographic characteristics.
- Provide accessible, redundant schoolwide alerts and a direct verified route to emergency dispatch; design for loss of mains power, IP network or a single service provider.
- Require review of false positives and false negatives, privacy impact, retention periods, and human override; never let software automatically trigger physical force.

ASCS-02 / Barriers and protected sheltering—not a dangerous lock-in

- Use supervised visitor entry, maintained perimeter doors, classroom locksets operable from inside, clear emergency signage, and rapid staff-initiated protective actions appropriate to the situation.
- **No entrapment:** Emergency egress must remain code-compliant and accessible; no improvised door barricades, chains or automated mass locking that prevents safe evacuation or traps people during fire, smoke or medical emergencies.
- Choose code-approved hardware with accessibility and fire-marshal input, outside emergency override for responders, power-failure behavior defined in writing and authorized manual fallback.
- Validate through accessibility walkthroughs, evacuation drills, fire-code sign-off, medical-response drills and realistic but trauma-informed exercises. Keep campus-specific configurations restricted.

ASCS-03 / Canine detection as an optional, specialized layer

- Consider properly trained, insured and qualified detection dogs with professional handlers for bounded, lawful screening or area searches when local evidence supports value. Weapon scent detection is not equivalent to continuous detection of a shooter.
- Obtain written scope, animal welfare plan, training/re-certification records, false-alert review, student contact rules, disability/allergy accommodations, supervision and bite-injury risk controls.
- Never use uncontrolled dogs, student-directed attack-dog deployments, or coercive canine sweeps as a substitute for an individualized legal basis or sound prevention program.
- Compare with noncanine alternatives on cost, detection performance, staffing burdens, false positives and unintended effects. If local evidence is insufficient, remain in pilot/evaluation status.

ASCS-04 / Qualified human intervention and lawful force

- Separate ordinary staff protective duties from professional security and law-enforcement intervention. Staff should be empowered to alert, protect, evacuate or shelter and render lifesaving aid—not required to confront an attacker.
- If a district evaluates armed on-site responders, require a specific legal authorization, board review, law-enforcement coordination, screened personnel, relevant professional training, maintained competencies and an explicit accountable command structure.
- Require written de-escalation and force policies; medical support; identity and interoperability protocols; secure custody of issued weapons; independent incident review and student-rights safeguards. No school-operated autonomous weapon system or force decisions based solely on algorithmic output.
- Evaluate unintended consequences including mistaken identity, bystander risk, discriminatory enforcement, weapon diversion, and emergency-responder confusion. A policy or staffing level alone is not evidence of effectiveness.

Accompanying safeguards and acceptance gates

Every subsystem must pass **legal/code approval → tabletop → controlled functional testing → realistic multi-hazard drill → independent verification** before designation as operational. Publish only aggregate performance; keep live camera views, access bypass routes, responder positioning and campus-sensitive vulnerability details in restricted professional records.

Use the current annotated bibliography and public source register. Independently verify material interpretations before institutional use. Operational tactics and campus configurations are excluded from public release.

3. Prevention: behavioral assessment, reporting and online harm

ASCS-00 upstream prevention: Begin with reducing youth access to unsecured firearms through safe-storage guidance, caregiver engagement and voluntary community partnerships. The detailed program appears in Section 0; do not infer household firearm ownership from participation or non-participation.

Behavioral threat assessment and management (BTAM)

Follow NTAC's operational model: identify specific concerning conduct, gather lawful contextual information, assess the circumstances and available protective factors, and manage risk through an interdisciplinary team and supports. There is **no useful demographic or ideological profile** of a school attacker. Threat inquiry must focus on conduct, capability, context, expressed intent and credible corroboration—not race, religion, political affiliation, disability, lawful protest or merely unpopular views. [F02–F04] [W04]

Online behavior. Evaluate voluntary reports, publicly available evidence, school-system logs lawfully within district authority, and materials properly supplied by students/families. Require purpose limitation, appropriate consent/search standards, provenance, retention controls, second-review for adverse conclusions and human verification. Do not assume a student's following, group membership, slang, game activity or political expression establishes a threat. Off-campus speech can have First Amendment protection. [L01] [L03] [F17] [W04]

Student safeguarding. For sexual extortion, violent-network grooming, coercion to commit harm, AI-generated intimate-image harassment and trafficking, prioritize immediate welfare, professional counseling, safe parent/guardian contact where appropriate, specialist referrals and lawful evidence preservation. Avoid recirculating sexual imagery or making a student repeatedly recount traumatic events. For covered-platform nonconsensual intimate-image removal, use the applicable Take It Down Act process; schools should not make independent claims about the perpetrator without review. [F12–F14] [L04]

Disclosure and evidence custody controls

LAW: when relying on FERPA's health-or-safety emergency exception, officials must identify an articulable and significant threat, limit release to recipients who need the information for protection, and document both the threat supporting disclosure and recipients in the student's records. The exception is **not** a general means of sharing student records for hypothetical exercises. [F25] [F26] [F22]

PROPOSAL: log who obtained or reviewed digital evidence, when, for what specific purpose, and whether the material was original, altered, inferred, or merely alleged. Separate child-victim support files from disciplinary cases; require secondary review before irreversible adverse action. Where legal retention rules allow, delete or restrict irrelevant materials and record the appeal/correction outcome.

Adversarial integrity checks for reports, images and online allegations

Threat reporting is a safety input, not an automatic disciplinary verdict. Train reviewers to distinguish an original observation from a screenshot, repost, anonymous tip, AI-generated media or copied allegation. Document chain of custody and an alternative explanation before reaching adverse findings. **Independent confirmation of a serious hazard may justify protective action; legal and school procedural rules govern subsequent searches, disclosures, discipline or referral.** Apply the same protocol regardless of the political position of the reporter or accused person. [F05] [F06] [F26] [W04]

Every case should have two separate statuses: **protection urgency** (immediate / elevated / routine) and **allegation status** (unverified / corroborated / disproven / unresolved). Permit confidential, accessible reporting while investigating objective signs of impersonation, collusion or malicious fabrication; do not label a good-faith reporter dishonest solely because allegations are unsubstantiated.

Reporting pathways resilient to abuse

Maintain accessible confidential and attributable channels; allow reasonable anonymous reporting with clear triage and two-person review of high-impact decisions. Jointly design swatting verification with PSAP and police: **protect promptly, verify in parallel**, keep original message/media, limit public amplification, and record why each action was taken. Provide an independent avenue for someone falsely accused to contest facts, request correction and challenge unnecessary disclosure. [F05] [F06] [F11] [W05]

4. Physical protection, entry screening and technology

Architectural and operating controls

Apply CISA's **layered, site-specific** model: school grounds and arrival zones; supervised entrances; visitor screening and badge integrity; secured yet readily evacuable interior doors; protected communication; accessible circulation; and after-hours/sports/bus exceptions. A locked door alone does not prove intrusion resilience. Every proposed barrier must be reviewed with local fire/building officials for egress, life safety and accessible accommodation. [F01] [W01]

Entry screening. Select measures based on credible facility threats, throughput, accessibility and staffing. Screen visitors using independent identity/authorization checks, custody restrictions, bag or object checks only where legally permitted and documented, and specialist handling of suspicious items. Metal or AI-assisted weapons screening requires measured sensitivity, specificity, staffing burden, queue consequences and rights review. Avoid unnecessary blanket screening or discriminatory selection practices. [F01] [F17]

Functional design reviews, not gadget-first upgrades

For each campus entrance, assembly area, portable building, cafeteria, bus loading point and extracurricular location, record the **actual protective action and communication path** during realistic operating hours. Test whether screening creates queues that increase exposure, whether automatically locked doors remain safe for fire egress, and whether alternative entrance procedures quietly bypass the intended control. Include students and staff who use mobility, hearing, vision or language accommodations. [F01] [F07] [W01]

AI-assisted cameras and detection systems

Purpose: provide a human-reviewable observation cue for potentially dangerous objects, intrusion into restricted areas or observable emergencies—not automated suspicion scores or disciplinary rulings. In procurement pilots, measure missed detections, false-alarm rates in ordinary student conditions, latency to verified human acknowledgment, demographic/lighting/weather effects, system uptime, cyber and vendor controls, video retention and auditability. Never trigger use of force solely from a model output. The NIST AI RMF is a voluntary governance framework, not proof that a product works. [F17] [F16]

Cyber-physical controls. Adopt phishing-resistant MFA where available, patch and vulnerability management, segmented critical alerts/cameras/access control, tested offline backups and authenticated multi-channel school-to-PSAP messages. Exercise a compromised alert console and a simultaneous genuine event using only a test environment; do not send mock incidents to public emergency channels. [F15] [F16]

Capability trial protocol: AI alerts, weapons screening, and analytic sensors

Before purchasing, run a **school-specific, pre-registered evaluation** under authorized controlled conditions; require vendor and district evaluators to agree on what constitutes a positive event before reviewing results. Capture **verified detections, missed events, false alerts, alerts requiring human review, end-to-end notification latency, queue delay, outages, and accessibility impacts**, alongside privacy complaints and workload. Report

confidence limitations and the operating conditions actually tested; vendor demonstrations and laboratory benchmarks are insufficient evidence of campus effectiveness. [F17] [F27]

Provide **human confirmation and two independent notification channels** for safety-critical alerts. Define safe fallback if power, networking, camera views, or the AI model fails; prohibit automatic discipline, stop-and-search or force solely from an AI output. Purchasing approval must include cybersecurity patching, data retention, incident logs, export capability, independent audit rights, total ownership costs and cancellation criteria. [F16] [F17] [F27]

Field trials: preregistered evidence and safe acceptance criteria

PROPOSAL, informed by CISA SSAT, NIST AI RMF and FEMA HSEEP. Before a test, freeze its purpose, operating limits, positive and negative scenario definitions, baseline condition, population/zone sample, accessibility accommodations, data-retention rules, evaluator independence and **safety abort conditions**. Use *inert or simulated* observations, not functional weapons, live emergency dispatch messages, adversarial intrusion or unsafe equipment interference. Obtain formal permission from district and responder partners. [F24] [F27] [F29–F30]

For an **automated alert or screening pilot**, calculate (within the approved sample) **sensitivity = true alerts / (true alerts + missed events)**, **false-positive rate = false alerts / (false alerts + true negatives)**, and end-to-end timing to **human acknowledgment and safe occupant notification**. Disclose all denominators, confidence limitations, excluded cases, outages, labor costs and corrective actions. If a denominator is zero or the sample was designed only to demonstrate success, write **NOT ESTIMABLE**—never report 100% accuracy. Test fallback instructions with the analytic component disabled. Misclassification cannot automatically initiate a search, detention, disciplinary finding or force response.

For **human personnel, equipment and working dogs**, verify credential/current authorization, training and medical readiness, de-escalation and cooperation with arriving emergency responders. Record child welfare, ADA, traumatic stress and mistaken-identification risks. Do not conduct force-on-force or canine-apprehension training as school drills. For **counter-UxS**, separately assess passive observation/reporting and protected-occupant procedures; any active aircraft/spectrum interdiction demands specific competent-agency authority. [W06–W11] [F18–F23]

Acceptance record: goal; applicable legal authority; safe tested conditions; baseline; objective performance; sampled locations/dayparts and accessibility needs; adverse effects; fallback; ownership/cost; reviewer signature; action on failure; **expiry/retest trigger**. An advanced system should be rejected, deferred or rolled back if evidence shows no meaningful incremental protection, problematic false alerts, unacceptable rights impacts or unmaintainable operation.

Counter-unmanned systems and security canines

Treat unexpected drones and ground robots first as **observed hazards, not established malicious actors**. Train staff to recognize unsafe conditions, move vulnerable occupants to protection, preserve safe observations and notify qualified responders. Procurement should distinguish **passive sensing** from **active interdiction** (jamming, takeover, kinetic defeat): the latter implicates federal aviation/radio law and only specially authorized operators may act where applicable. Qualified law enforcement must verify current federal certifications, regulations and task-force arrangements; a district itself has no general interdiction authority. [F18–F20]

Explosives-detection dogs can be evaluated as a specialized screening capability with a certified handler and law-enforcement partner. Police tactical K-9 functions are separate, with distinct force and injury risk. Document bite prevention, handler suitability, accommodations for service animals, veterinary welfare and independent performance reviews. Do not conflate ordinary service animals with suspicious animals. [F21] [F23]

5. First minutes: protective action, responders and force limits

Design requirement: no dependence on five-minute police arrival

An outside police arrival time of five minutes is considered inadequate **as the sole planned means of immediate protection**. This is a conservative district design assumption; actual dispatch, travel, access and intervention times must be measured site by site. Specify separate performance times for **event recognition → school/PSAP**

notification → occupant warning → appropriate protective action → lifesaving care → responder arrival and control. Measure high-occupancy events, arrival/dismissal, remote buildings, buses, special-needs access and power loss. [F07] [F08] [W01] [W02]

Prearrival timeline: what schools should actually measure

Use comparable time points during approved exercises and lawful incident review: **T0** initial credible cue; **T1** authorized school acknowledgment; **T2** warning issued; **T3** warning received and understood; **T4** appropriate protective action initiated; **T5** qualified aid available when safe; **T6** PSAP acknowledgment; **T7** external responder arrival and command integration. Record actual timestamps, uncertain starting cues, tested locations, accessibility conditions, and elapsed intervals. Event numbers do not prescribe the chronological order of every real incident. [F07] [W01] [W02]

The working constraint is **do not rely on police arrival within five minutes**; it is not a claim that exactly five minutes guarantees harm or a legal performance standard. Validate response choices by circumstance and avoid high-stress simulated attacks involving children. Test concurrent hazards and communication failure in a **discussion or approved functional** setting.

First-minutes time and coverage protocol

PROPOSAL. Time the full protective chain, not just the police dispatch interval. The event log should distinguish **T0** (verified cue or initial credible report), **T1** (authorized school acknowledgment), **T2** (warning issued), **T3** (warning received and understood by a sample of affected occupants), **T4** (appropriate protective action initiated), **T5** (qualified aid made available when safe), **T6** (911/PSAP acknowledgment), and **T7** (external responder arrival and command integration). Some events will have uncertain or different starting cues; note that explicitly instead of back-solving a false precision.

Report observations **by site, zone, daypart, disability/accessibility condition, and failure scenario**. Provide sample sizes, worst observed delays, distribution ranges, unknown or missed recipients, and whether exercise actors followed safe, non-tactical procedures. A five-minute planning assumption is a reason to ensure immediate on-site capability; it is **not** a legally mandated response target or a scientifically validated universal deadline.

Decision criteria: establish safety-driven local targets with fire/EMS, PSAPs and accessibility specialists *before* tests; log deviations and meaningful tradeoffs. Do not invent numeric detection benchmarks where no normative or independently validated standard exists. A vendor demo with selected actors is not representative evidence of real campus performance. [F07] [F29] [W01–W03]

First-minutes functional sequence (role-based, not tactical)

Time phase	School and incident lead	Qualified responders / support
Immediately after credible observation	Initiate locally appropriate warning and protective action; inform 911/PSAP of both facts and uncertainty; activate alternate channels if necessary	Dispatch verifies/coordinates; law enforcement, fire and EMS receive common situation updates
Before outside responders arrive	Account for occupants as feasible; protect against the relevant hazard; use trained bleeding-control/AED capability where conditions are safe; maintain controlled child release	Authorized on-campus personnel act within written law/policy; medical and communications teams support protection
When responders arrive	Establish clear leadership handoff; provide safe site information through agreed channels; avoid circulating unverifiable suspect descriptions	Incident command and specialized response under agency protocols; preserve medical/reunification continuity
Stabilization and recovery	Correct false reports; reunify families; document actions and assist victims; independent review	After-action improvement, legal review, medical support and service restoration

Vetted protective personnel: less-lethal and lethal force

Evaluate commissioned SROs, contracted authorized guards and other specifically permitted security personnel **as distinct legal categories**. Any program needs written scope; stringent child-safety suitability and background checks; recurring qualifications; de-escalation; limited approved tools; safety storage; disability and youth considerations; clear police identification/coordination; immediate medical care; transparent incident logging; and independent review. A weapons-possession exception is **not** equivalent to authority to use lethal force. [F08] [W06–W11]

A force policy must favor avoidance, de-escalation, protected withdrawal and non-force remedies whenever feasible. Less-lethal tools can still kill or cause grave injury. Peace officers are governed by RCW 10.120.020; noncommissioned personnel do **not** automatically inherit police powers and require a separately documented legal basis. Deadly force is an exceptional response to qualifying imminent threats, governed by applicable law; an AI classification or unverified tip alone must never authorize it. No operational tactics or weapon selection are prescribed here. [W09–W11]

Conditional advanced-capability approval

For **armed security and less-lethal equipment**, require a documented legal-role matrix for commissioned officers versus other permitted personnel, recurrent qualification, explicit limits on civilian security authority, safe storage and access, rescue-medical integration, incident logging, and independent review. Capture potential harms (misidentification, unintended injury, discipline creep, discrimination) as safety outcomes, not merely legal footnotes. Do not assume a security presence is effective without campus-specific coverage and coordination evidence. [F08] [W06–W11]

For **drone/rover detection and professional canine programs**, start with location-specific hazards, qualified operator scope, false-alarm impact, privacy and disability accommodations, and documented coordination with legally empowered agencies. An observation system must not be equated with lawful permission to jam, seize, deploy force or conduct a search. [F01] [F17]

Traumatic-injury response

Immediate statutory check: RCW 28A.210.440 requires each Washington campus to provide accessible bleeding-control supplies with mandated contents; at least two trained employees per school, with increased coverage for schools over 1,000 students; annual and post-use inventory/replacement. Integrate with first-aid and AED policies, EMS staging and student accessibility; do not substitute a purchased kit for trained and demonstrated readiness. [W03]

6. Incident-specific protective decision guides

Threat / incident	First protective objective	Follow-through and safeguards
Armed/edged assault; violent intruder	Rapid warning; location-appropriate separation, lockdown or evacuation; EMS request	Lawful responder-led resolution; trauma care and accountability; factual communication without unsupported identification
Explosives / suspicious objects / hazardous release	Avoid contact and secondary exposure; specialist consultation; shelter/evacuate appropriate to hazard	No untrained searches or device handling; coordinate fire/hazmat/bomb specialists; preserve evidence
False threat / swatting / impersonated alert	Protective action without waiting for perfect authentication; confirm independently through PSAP	Keep an auditable correction trail; prevent malicious use of school discipline; manage rumor propagation
Abduction, custody interference or missing child	Verify child location immediately; control student release; call law enforcement when indicated	Check orders/records lawfully, preserve privacy, avoid reliance on synthetic ransom media

Threat / incident	First protective objective	Follow-through and safeguards
Cyber compromise or communications outage	Switch to an independent alert path and manual protective procedures	Recover through tested backups; verify commands before announcements; avoid exposing student records
Coercion, trafficking, state-sponsored intimidation, extortion	Safeguard the affected student/family, avoid confrontation and retaliation	Appropriate specialists, evidence preservation, confidential referral; no inference from ethnicity or political belief
Drone, rover, canine or compound threat	Move occupants away from observed hazard; initiate coordinated incident assessment	Qualified specialized response; do not improvise active interdiction or canine force; re-evaluate when facts change
Earthquake, wildfire smoke, severe weather, utility failure	Execute hazard-specific shelter/ evacuation and continuity procedures	Accessibility, transportation, family communication and prolonged service recovery

These summaries are *decision frameworks*. Final site-specific instructions and authority assignments belong in approved building EOPs and law-enforcement protocols. [F01] [F07] [F10] [W01]

7. Constitutional and civil-liberties constraints that improve safety

G0 cross-reference: Apply the integrated rights gate to legal compliance, intake, detection, disciplinary, canine, professional-response, and privacy decisions. See *Constitutional Governance and Public Trust*. Institution-specific law-enforcement agreements require separate review and adoption; no signed MOU addendum is supplied by this public reference.

The **U.S. Constitution is the supreme law of the land**; Washington law cannot override it. State law and district policy may provide additional lawful protections. The First Amendment protects lawful speech and association, including important off-campus student expression. The Fourth Amendment and relevant student-search doctrine constrain invasive searches. The Fourteenth Amendment requires due process and equal treatment. FERPA limits education-record disclosure. [L01–L03] [L02] [W15]

No accusation is a finding. In criminal cases, the legal presumption of innocence places the burden on prosecution to prove guilt beyond reasonable doubt. School protective/disciplinary decisions have separate standards and legally required process. Proposed district protections should nevertheless require corroboration, documented decision grounds, notice and opportunity to respond, fair appeals, proportionality, correction and a path to restore wrongly impaired reputation. Washington expressly prohibits exclusion solely for a threat-assessment referral. [W04] [W12–W14]

No viewpoint surveillance. Neither political identity nor lawful religious, civic or ideological association constitutes evidence of dangerousness. Case reviews must separate genuinely threatening conduct from protected speech; AI, digital searches and reporting logs must be purpose-limited, independently reviewed, access-controlled and deleted when no longer justified. [F02] [F17] [L03]

Safety staff accountability. Written law-enforcement/security agreements, discipline-role boundaries, complaints and reporting of force/security incidents must follow Washington requirements. Officer identification and response coordination are essential to prevent misidentification during an emergency. [W06–W08]

8. Implementation, assurance and governance

Campus leadership: authority to improve beyond minimum compliance

Required district leadership expectation (proposed policy): the superintendent and board should empower principals to identify campus-specific exposure, challenge inherited assumptions, develop and test creative protective solutions, and drive continuous improvement. Administrators should not confuse successful completion of legal forms with effective prevention, protection and response. Establish written delegations, discretionary pilot budgets, direct

escalation to district leadership, legal/technical review support, and a protected route for reporting failures without retaliation.

Performance contract: assign each campus an accountable safety lead; require a short risk-and-opportunity register identifying (a) the uncovered hazard, (b) the proposed change, (c) the expected measurable benefit, (d) legal and safety constraints, (e) pilot owner and approver, (f) observed evidence and adverse effects, and (g) a decision to adopt, revise or retire. Publish only non-sensitive outcomes. District leadership owns resourcing and approvals; principals should not be held responsible for changes they lack authority or funds to deliver.

Innovation safeguard: prioritize simple, reversible and accessible improvements before invasive or hazardous systems. Qualified personnel and counsel must approve activities involving searches, student data, force, restricted tools, external responders or live exercises. Keep independent verification and corrective action central. This authority framework is a district proposal, not a new requirement imposed by CISA or Washington law. [F01] [F02] [W01]

Countermeasure decision ledger — required before award

Capability	Legal/technical gate	Safety benefit to demonstrate	Principal failure or harm to measure
Building access and visitor controls	Fire, ADA and lawful entry policies	Fewer unauthorized entries without lost egress	Lockouts, delay, unsupervised alternative entrances
Weapon/entry screening	Search rules and consent/ policy	Reliable hazard detection and acceptable throughput	False accusations, queues, disparate burden
AI camera analytics	Privacy, information security, independent testing	Improved verified hazard-to-alert interval	Missed detections, false positives, retention abuse
School-security and armed staffing	State law, agency agreement, qualifications	Coverage and appropriate protective coordination	Misidentification, inadvertent injury, escalated discipline
Less-lethal equipment	Approved lawful policy and recurrent training	Safe, proportionate response options	Severe injuries and unjustified deployments
Explosives-detection canines	Handler accreditation and animal/ADA safeguards	Defined detection mission under realistic conditions	False alerts, bites, student distress
UAS detection and specialist referral	FAA/FCC/DOJ limits and counterpart agency authority	Verified situational awareness	False attribution; unlawful interdiction; privacy harm
Cyber/alert resilience	CISA security hygiene and PSAP coordination	Alert availability during actual service loss	Spoofing, single-vendor failure, missed backup alerts

Procurement status: 'pilot pending' until written legal authority, operator, funding, test plan, stop/rollback rule and harm controls are documented; 'field validated' only after witnessed tests. No line above claims that the technology has already reduced school violence. [F01] [F08] [F17] [F27] [W06–W10]

One 12-month delivery plan

Window	Primary owner	Deliverables and acceptance evidence
Days 0–30	Superintendent / safety director / principals	Assign campus leads; verify bleeding kits/staff counts, egress, alert coverage, PSAP contacts, substitute instructions, custodial release controls; list P0 failures
Days 31–90	School leadership + police/fire/EMS + IT	Update hazard annexes; tabletop and functional tests; record timed warning/first-aid/communications results; resolve urgent risks with independently checked evidence
Months 4–6	Procurement + legal + security	Only after gap analysis: pilot screening, AI detection, trained personnel or canine services with objective accuracy, legal and financial gates

Window	Primary owner	Deliverables and acceptance evidence
Months 7–12	Board oversight / external evaluators	Refresh EOP; scenario exercises for cyber/physical coupling, swatting and abduction; audit false-positive harm; adopt correction schedule and procurement stop/go decisions

First 90 days: milestone acceptance, not a paper exercise

Checkpoint	Deliverable	Objective completion condition
Day 15	Named school and district owners; legal compliance exception log	All P0 controls have owners; absent records expressly labeled unassessed
Day 30	Physical campus inspection and bleeding-control / emergency-alert inventory	Each campus has signed inspection evidence and critical-gap list
Day 60	Approved tabletop and functional scenarios with PSAP and student services	Synthetic-case exercises produce timed observations, failure logs and alternate-channel results
Day 90	Independent reassessment and corrective action plan	Every critical failure is corrected or has documented interim protection, accountable owner and due date

PROPOSAL, not statutory deadlines. These are district management milestones. State and federal legal deadlines remain whatever the relevant provisions actually require. A tabletop exercise does not establish real-world effectiveness; physical tests must be safe and specifically authorized.

Measurement and independent review

Record: **alert latency, backup alert coverage, occupant-protection initiation, responder coordination time, trained-staff availability, kit validity, successful reunification accountability, false/duplicated reports, AI-alert precision and missed-event tests, privacy complaints, force incidents, and time to close corrective actions**. Record **not assessed** for absent evidence; never equate an equipment purchase, approved policy or simulated discussion with operational validation. [F01] [F07] [F17] [W08]

Evidence tiers and independent sign-off

- **Unassessed:** No reliable local evidence, or a vendor assertion only. Planning and controlled evaluation only.
- **Documented:** Policy, inventory, ownership, or training records exist. Documented arrangements; protective function is not yet demonstrated.
- **Inspected:** A qualified inspection checks condition and scope. Observed condition within the inspection boundary.
- **Exercised within stated conditions:** An authorized controlled test records outcomes, misses, and adverse effects. Performance only under the declared test conditions.
- **Independently verified within stated scope:** Independent reviewers corroborate repeatable tests or suitable operational records. Accepted evidence for the named scope, with limits and revalidation triggers.

Require independent evaluator signature, test date and scope, deficiencies, any incident/civil-rights impact, and next revalidation date. Missing data means **UNASSESSED**. Escalate failure of life-safety controls to district leadership promptly; never use a composite score to mask a failed critical control.

Continuous-improvement cycle: exercises, corrective actions and publication

Adapt FEMA's **Homeland Security Exercise and Evaluation Program (HSEEP)** as a method, not as a claim of federal certification: select objectives against actual campus vulnerabilities; use controlled tabletop, functional and appropriately authorized full-scale exercises; have evaluators record observable results; produce an **After-Action Report/Improvement Plan (AAR/IP)**; then retest the specific failure. Washington encourages multiple exercise types across a four-year period, but that encouragement must not be mistaken for a blanket statutory mandate to run every exercise in a given semester. [F29] [W01]

Keep two linked reporting products: a **restricted operational evidence file** (exact layouts, people, access systems, hardware configurations and test logs) and a **board-level aggregate exception report** (critical gaps, owner, interim

controls, deadline, accessibility impact, budget and closure evidence, without exploitable implementation specifics). Assign one administrator to close each improvement action and a different reviewer to verify closure.

For **AI, automated screening and sensors**, retain ground-truth definitions, positive/negative test cases, missed alerts, nuisance alarms, out-of-scope populations and conditions, false-action consequences, model/version changes, privacy effects and manual fallback performance. Do not use AI-generated labels as the sole basis of discipline or force. For **authorized protective personnel**, review legal authorization, agency agreements, qualification status, exercise and reporting records, medical response, and the Washington annual safety/security incident reporting provisions. [F17] [W06–W10]

Threat intelligence and false reporting: track operational threat indicators and corroborated misconduct, not ideological categories. Separate unverified tips, genuine emergencies, maliciously fabricated reports and good-faith mistakes. A reporting system that discourages genuine complaints or fails to correct wrongful attribution is itself a safety and civil-rights risk. Keep incident files protected, with limited disclosure and correction/appeal channels. [F02] [F05] [F06] [W04–W05]

Board review: four decision gates

Gate	When	Evidence to present	Board action
G0 — authority and scoping	Start	Named district owner, campus list, written legal/privacy scope, partners, safety restrictions	Authorize assessment; not broad procurement
G1 — critical controls	Days 1–30	Statute-by-statute compliance, bleeding-control counts, drill and notification records, initial critical findings	Fund/assign immediate corrections
G2 — operational demonstration	Days 31–60	Tested alert/egress/accessibility coverage, PSAP participation, event logs, first AAR/IP, credible fallback	Require independent retests
G3 — residual risk and investment	Days 61–90	Closed versus open critical gaps, sustained readiness, comparative cost/benefit and harms of optional controls	Approve, defer, condition or reject projects

A *conditional approval* must expire without a satisfactory retest or whenever material software, staffing, facility or legal changes invalidate earlier evidence. The chief safety official should escalate imminent protective deficiencies immediately, rather than waiting for the next board meeting.

Assurance governance and automatic reopening of findings

PROPOSAL. Maintain three linked artifacts: (1) a **public board exception report** containing the number of assessed campuses, unresolved mandatory requirements, categories of critical controls, funding requests and correction timelines; (2) a **restricted campus evidence packet** containing permitted test results and sensitive facilities/personnel details; and (3) a **student-specific protected case file** for individualized reports, FERPA disclosures, reviews and corrections. Never copy student allegations, exact security blind spots, protected routes or personnel deployment rosters into public board packets.

Require independent **reopening** whenever: a critical control changes equipment/software/provider; a key qualified staff position or coverage changes; a campus is reconfigured; a student-accessibility need is unmet; an exercise finds an invalid assumption; a control has materially false alerts; or a new binding requirement or credible site-specific hazard invalidates the old test. Use an **interim protective measure** while reopening is investigated, and close only with documented retest where applicable. [F29–F30] [W01–W08]

The district should report both **readiness** (percentage of *applicable* controls independently demonstrated for the tested scope) and **critical exceptions** (absolute count and age, including unassessed mandatory controls). Report

these separately; the first metric cannot cancel the second. Avoid districtwide percentages without denominators and campus coverage. Any safety metric is descriptive, not a probability that a school will resist an attack.

Lifecycle cost and reversibility record

Every major optional capability should have a completed business case: **one-time capital cost; annual licensing and connectivity; personnel and recurring qualification; facilities/fire/ADA changes; privacy/data-management cost; maintenance; evaluation; insurance and potential liability; vendor exit costs; expected useful life; and opportunity cost**. If reliable prices or benefits are unavailable, write **TBD** rather than inventing estimates. Require a sunset/re-approval trigger and a non-proprietary way to retain incident evidence when changing vendors.

The choice is not only 'buy versus do nothing': compare a technology purchase with procedural corrections, staffed entry supervision, improved communications, training, trauma supplies and tested continuity. Prefer an intervention with measurable safety benefit and acceptable unintended harms under real school conditions.

Decision thresholds for advanced procurement

Every proposal should present: (1) problem and hazard model; (2) lawful purpose and authority; (3) independent operational baseline; (4) measured improvement over less intrusive alternatives; (5) adverse consequences to students; (6) sustainment staffing, integration and outage modes; (7) performance test and stop/rollback criteria. **Reject unverifiable claims of zero false alarms, instantaneous intervention, universal weapon recognition or infallible offender prediction.** [F01] [F17]

National innovation sharing and federal advisory governance

Proposal, not current mandate: Establish a voluntary, moderated nationwide school-safety administrators' forum. Use a standard record of hypotheses, legal review, independent field evidence, negative results, costs and unintended harms. Request nonbinding technical reviews and recommendations from CISA, USSS NTAC, DOJ BJA/NIJ, Department of Education and FEMA, and cooperate with states and Tribal education authorities. Federal oversight must be authorized by participating agencies, not presumed. Publish only de-identified, non-sensitive learning products, with restricted practitioner access for legally shareable operational details. Require independent replication before calling a practice effective.

9. Further-research agenda

1. **Before-arrival life safety:** Which access, communications and medical measures show the largest practical benefit at the district’s actual buildings, transport routes and events?
2. **Armed personnel and SRO tradeoffs:** What independent research separates prevention or response benefits from effects on arrests, discipline, disparate impacts, mistaken-identity risk and educational climate? Do not presume net benefit.
3. **Screening throughput:** What are measured true-positive/false-positive performance, staffing requirements and crowding effects of each proposed entry system?
4. **AI camera validity:** How do alerts behave on school-specific camera angles, lighting, backpacks, sports equipment, disabilities and crowds? Can results be independently replicated?
5. **Swatting and synthetic-media authentication:** Which protocols best allow prompt protection without unjustified escalation or unsupported accusations?
6. **Online coercion:** How can schools help exploited children while limiting repeated exposure, discovery, unnecessary data sharing and retaliatory bullying?
7. **Counter-UAS legal implementation:** Which specific federal statutory/training pathways, if any, apply to local partners today? Do not infer authority from a vendor catalog.
8. **Security canines:** What independent studies address detection effectiveness, handler requirements, liability, welfare and student accessibility?
9. **Equity and civil liberties:** What audit measures reveal wrongly targeted individuals, political viewpoint bias, improper searches and unjustified exclusion?

10. **All-hazards continuity:** What minimum capability works when power, telecom, transport and primary responders fail together?

Research order: Start with federal primary guidance and binding state law, then independent effectiveness studies, then local vulnerability and validation data. Agency warning bulletins describe hazards; they are not proof of prevalence at a given school or proof that a given vendor product is effective.

10. Glossary and evidence hierarchy

BTAM: Behavioral Threat Assessment and Management. **PSAP:** Public Safety Answering Point (911 dispatch). **SRO:** School Resource Officer. **UAS/UGV/UxS:** unmanned aircraft / ground / broad unmanned systems. **C-UAS:** counter-unmanned aircraft systems. **EOP:** Emergency Operations Plan. **Less-lethal:** intended to reduce injury risk but not harmless. **Validated:** independent measured performance under approved conditions; an untested planned feature is **unassessed**.

Legal reading hierarchy: (1) U.S. Constitution and applicable binding federal law/cases; (2) Washington Constitution/statutes/regulations not conflicting with federal law; (3) binding district/agency policies and contracts; (4) advisory federal and state guidance; (5) research, planning scenarios and product claims. *Guidance is not a license to search, monitor, detain, discipline or use force.*

11. Campus field verification and independent assurance

Controlled testing protocol • proposed district procedure

Purpose. Make the integrated advisory actionable without publishing tactical security weaknesses or treating unperformed checks as certification. This protocol is a *district proposal*, not a new legal requirement. All template rows begin **UNASSESSED**.

1. Approve the evaluation before any exercise

The district safety owner, school administrator, IT lead (if relevant), PSAP/agency partners (if involved), privacy officer, accessibility lead and evaluator agree on site, safe scope, objectives, fictional inputs, abort/stop conditions, participants, access protections and record retention. Never use real emergency calls, weapons, live counter-drone equipment, coercive scenarios involving real children, or potentially injurious force demonstrations as school exercises. Coordination and legal approval are mandatory where specialist services are contemplated. [F07] [F29–F30] [W01]

2. Establish the legal baseline separately from tests

Use the legal compliance register (Section 14). Verify every relevant RCW obligation with current records or inspection: safe-school plan and monthly drills; incident-command certification; employee/substitute briefings; emergency response system; bleeding-control contents, staffing and inspections; security-provider agreements, complaints and reporting; behavior-based threat assessment; and FERPA disclosure logs. **An empty compliance entry is not a violation finding and not a passing result.** [W01–W08] [F25]

3. Select representative protective conditions

Use the representative test conditions (Section 15). Include an ordinary classroom, remote/portable area, crowded/noisy assembly, transportation activity, accessible route, and formally controlled communications outage. Test the *entire path*: recognition, authorized acknowledgment, occupant warning, safe protection, coordination and fallback. Do not publish detailed diagrams, staffing patterns or blind spots with the public board report. [F01] [F07]

4. Record observations that another evaluator can reproduce

For each check document: `site/zone, scope/date, objective, preapproved criteria, authorization, assessor and witness, evidence level, test sample denominator, observed misses/false actions, timing with measurement limitations, accessibility alternative, harm/complaints, failure/abort reason, interim measure, owner, retest date`. Timing is measured from a defined starting cue. Missing observations are *UNKNOWN*. Where a

sample contains no actual positive or negative examples, never calculate 100% sensitivity or specificity from it. [F24] [F27] [F30]

Result	Permitted interpretation	Required next action
UNASSESSED	Unknown; no credible evidence yet	Assign owner and safe test
DOCUMENTED ONLY	Policy, equipment list or credential exists	Arrange appropriate demonstration
DEMONSTRATED / LIMITED	Observed under named conditions	Specify exclusions, fallback and retest
VERIFIED FOR SCOPE	Independent repeatable evidence for stated conditions	Set expiry and change triggers
CRITICAL DEFICIENCY	Required control absent or material protective failure shown	Implement immediate interim mitigation and escalate; do not average away

5. Assess optional capabilities only after essential gaps

Optional armed coverage, less-lethal equipment, working canines, AI camera analytics, enhanced weapons screening and counter-UxS products require individualized authority, comparative baseline, known operating costs, measured incremental benefit, adverse-effects review and independent validation. No supplier demonstration establishes universal reliability. Any active counter-drone interdiction requires qualified public-safety authority; district personnel have no blanket authorization. Keep force policy under legal and agency oversight. [F17–F21] [W06–W11]

6. Close with an after-action and board exception report

Create restricted evidence files and a sanitized board report: assessed campuses and zones; mandatory compliance status; critical issues with interim safeguards; accountable owners; dates; expenses; and independent retest outcomes. Neither a favorable average score nor a later procurement can close a verified critical failure. Reopen controls after staff, facility, vendor, software, policy or materially changed risk conditions. Use FEMA HSEEP/EEGs to align observations with exercise objectives and a documented AAR/IP. [F29–F30]

Records: the legal compliance register (Section 14), the representative test conditions (Section 15), the assurance checklist (Section 13), the assurance checklist (Section 13), and the threat and control mapping (Section 12).

Operational status: No live school, dispatch, IT or security verification conducted. The templates are ready for district authorization, not a declaration of readiness.

12. Integrated threat vector register and countermeasure crosswalk

Identifiers in this section belong to the legacy_hazard namespace. Engine scenario:T01 through scenario:T18 refer to different records. Never join registers using an unqualified overlapping identifier.

Assessment rule: These 56 planning pathways are neither incident-frequency estimates nor a list of confirmed local attacks. Every candidate control must be evaluated for a particular campus. All vector statuses remain **UNASSESSED**.

Each entry includes the existing threat taxonomy, recommended initial protective response, proposed control IDs, responsible parties, and evidence necessary for demonstrating coverage. Control IDs are expanded in Section 13.

V01 — Firearm assault

V15 upstream addition: Prioritize prevention of unauthorized youth access through secure storage and the ASCS-00 community program; document voluntary outreach and pathways for credible-threat intervention separately from site protective controls.

Family: Intentional violence | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: BTAM; access/alerts; trained response. **Immediate action:** Protect/alert/911/aid.

Candidate controls: M01 M02 M03 M04 M10 M15. **Owners:** Facilities / principal; District safety / PSAP; Nurse / principal; BTAM team; Law enforcement / district; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S01 S03 (cross-check against the official bibliography before legal adoption).

V02 — Edged/blunt assault

Family: Intentional violence | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Observations; access; trained staff. **Immediate action:** Distance/protect/911/aid.

Candidate controls: M01 M02 M03 M04 M15. **Owners:** Facilities / principal; District safety / PSAP; Nurse / principal; BTAM team; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S01 S03 (cross-check against the official bibliography before legal adoption).

V03 — Explosive threat/IED

Family: Intentional violence | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: CISA bomb-threat training; specialists. **Immediate action:** Do not handle; protective decision by experts.

Candidate controls: M01 M02 M03 M04 M12 M15. **Owners:** Facilities / principal; District safety / PSAP; Nurse / principal; BTAM team; Specialist handler / legal; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S08 (cross-check against the official bibliography before legal adoption).

V04 — Arson/fire as attack

Family: Intentional violence | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Detection; fire prevention; building plans. **Immediate action:** Fire protocols/evacuation/911.

Candidate controls: M01 M02 M04 M15. **Owners:** Facilities / principal; District safety / PSAP; BTAM team; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 S15 (cross-check against the official bibliography before legal adoption).

V05 — Vehicular injury/ramming

Family: Intentional violence | **Evidence:** Foreseeable class | **Status:** UNASSESSED.

Protective approach: Professionally reviewed traffic controls. **Immediate action:** Clear people; emergency call.

Candidate controls: M01 M02 M04 M15. **Owners:** Facilities / principal; District safety / PSAP; BTAM team; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S01 (cross-check against the official bibliography before legal adoption).

V06 — Hostage/restraint

Family: Intentional violence | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: BTAM; communication; law enforcement liaison. **Immediate action:** Protect bystanders; police response.

Candidate controls: M01 M02 M04 M15. **Owners:** Facilities / principal; District safety / PSAP; BTAM team; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S03 (cross-check against the official bibliography before legal adoption).

V07 — Targeted hate/ideological violence

Family: Intentional violence | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Behavior-based assessment; student support. **Immediate action:** Protect target; report acts/ threats.

Candidate controls: M01 M02 M04 M15. **Owners:** Facilities / principal; District safety / PSAP; BTAM team; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S03 S14 (cross-check against the official bibliography before legal adoption).

V08 — Domestic/personal grievance spillover

Family: Intentional violence | **Evidence:** Foreseeable class | **Status:** UNASSESSED.

Protective approach: Trusted reporting; access rules; Include intimate partner or parental custody dispute spillover; verify lawful orders and safe release before taking adverse action.. **Immediate action:** Protect students; police coordination.

Candidate controls: M01 M02 M04 M15. **Owners:** Facilities / principal; District safety / PSAP; BTAM team; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S03 S46 S48 (cross-check against the official bibliography before legal adoption).

V09 — Insider access abuse

Family: Intentional violence | **Evidence:** Foreseeable class | **Status:** UNASSESSED.

Protective approach: Least privilege; dual controls; Prevent insider misuse of pickup records, student identity data and sensitive contact information.. **Immediate action:** Revoke access safely; investigate.

Candidate controls: M01 M02 M04 M15. **Owners:** Facilities / principal; District safety / PSAP; BTAM team; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S01 S09 S50 (cross-check against the official bibliography before legal adoption).

V10 — Remote accomplice/linked sites

Family: Intentional violence | **Evidence:** Planning class | **Status:** UNASSESSED.

Protective approach: Independent verification; multiagency liaison. **Immediate action:** Report linkage, protect and document.

Candidate controls: M01 M02 M04 M15. **Owners:** Facilities / principal; District safety / PSAP; BTAM team; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S03 S06 (cross-check against the official bibliography before legal adoption).

V11 — Sexual violence/exploitation

Family: Intentional violence | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Victim support; trusted intake; Include child trafficking victim protection and specialist referral, not only sexual-violence event response.. **Immediate action:** Safeguard victim and report per law.

Candidate controls: M01 M02 M04 M15. **Owners:** Facilities / principal; District safety / PSAP; BTAM team; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S05 S45 S49 (cross-check against the official bibliography before legal adoption).

V12 — Crowd surge/event violence

Family: Intentional violence | **Evidence:** Foreseeable class | **Status:** UNASSESSED.

Protective approach: Event design; safety stewards. **Immediate action:** Disperse safely; EMS/911.

Candidate controls: M01 M02 M04 M15. **Owners:** Facilities / principal; District safety / PSAP; BTAM team; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

V13 — Self-harm or suicide crisis

Family: Intentional violence | **Evidence:** Documented class; 2026 FBI warning | **Status:** UNASSESSED.

Protective approach: Supportive screening and referral; online-coercion victim protection without treating victims as suspects. **Immediate action:** Urgent crisis response and trusted safeguarding referrals.

Candidate controls: M01 M02 M04 M15. **Owners:** Facilities / principal; District safety / PSAP; BTAM team; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S03 S29 (cross-check against the official bibliography before legal adoption).

V14 — Deliberate hazardous-substance release

Family: Intentional violence | **Evidence:** Planning class | **Status:** UNASSESSED.

Protective approach: Facilities access; public health/hazmat liaison. **Immediate action:** Protect and refer to trained specialists.

Candidate controls: M01 M02 M04 M15. **Owners:** Facilities / principal; District safety / PSAP; BTAM team; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 S08 (cross-check against the official bibliography before legal adoption).

U01 — Unsafe/hostile drone

Family: Unmanned & animal | **Evidence:** Planning scenario; federal UAS risk guidance | **Status:** UNASSESSED.

Protective approach: UAS awareness training, event response plan, specialist escalation, preserve lawfully collected observations. **Immediate action:** Protect occupants; notify authorities; no unauthorized interference.

Candidate controls: M01 M02 M13 M15. **Owners:** Facilities / principal; District safety / PSAP; District / specialized agency; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S10 S32 (cross-check against the official bibliography before legal adoption).

U02 — Unmanned ground rover

Family: Unmanned & animal | **Evidence:** Planning class | **Status:** UNASSESSED.

Protective approach: Site access; suspicious object policy. **Immediate action:** Keep away; specialist response.

Candidate controls: M01 M02 M13 M15. **Owners:** Facilities / principal; District safety / PSAP; District / specialized agency; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S01 (cross-check against the official bibliography before legal adoption).

U03 — Aggressive canine

Family: Unmanned & animal | **Evidence:** Foreseeable class | **Status:** UNASSESSED.

Protective approach: Animal safety protocol. **Immediate action:** Separate; animal control; EMS.

Candidate controls: M01 M02 M12 M13 M15. **Owners:** Facilities / principal; District safety / PSAP; Specialist handler / legal; District / specialized agency; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S13 (cross-check against the official bibliography before legal adoption).

U04 — Other dangerous animals

Family: Unmanned & animal | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Site wildlife response. **Immediate action:** Separate/notify specialists.

Candidate controls: M01 M02 M12 M13 M15. **Owners:** Facilities / principal; District safety / PSAP; Specialist handler / legal; District / specialized agency; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

U05 — Remote-enabled mixed attack

Family: Unmanned & animal | **Evidence:** Planning scenario | **Status:** UNASSESSED.

Protective approach: Cross-hazard response with redundancy and authorized specialists; no speculative threat profiling. **Immediate action:** Hazard-specific protection and coordinated dispatch.

Candidate controls: M01 M02 M13 M15. **Owners:** Facilities / principal; District safety / PSAP; District / specialized agency; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S01 S32 (cross-check against the official bibliography before legal adoption).

D01 — Threatening social post

Family: Information & cyber | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Provenance; BTAM; confidential intake. **Immediate action:** Validate & protect proportionately.

Candidate controls: M02 M05 M07 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S05 S06 (cross-check against the official bibliography before legal adoption).

D02 — Swatting/false bomb report

Family: Information & cyber | **Evidence:** Documented federal advisory 2026 | **Status:** UNASSESSED.

Protective approach: Joint school–dispatch swatting plan; staff training and authenticated callback via known contacts. **Immediate action:** Protect first while dispatch evaluates parallel evidence; minimize amplification.

Candidate controls: M02 M05 M07 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S28 S36 (cross-check against the official bibliography before legal adoption).

D03 — Coordinated false allegation

Family: Information & cyber | **Evidence:** Documented class and federal guidance | **Status:** UNASSESSED.

Protective approach: Independent evidence chain and reviewer; flag clusters, impersonation or coordinated identical tips; Extend independent review to coordinated political/financial claims, foreign-actor impersonation, and child-release falsehoods; do not assign culpability from report volume.. **Immediate action:** Protection based on danger; no public allegation or disciplinary assumption.

Candidate controls: M02 M05 M07 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S05 S06 S28 S42 S47 S50 (cross-check against the official bibliography before legal adoption).

D04 — Deepfake/forged evidence

Family: Information & cyber | **Evidence:** Documented class; FTC 2026 guidance | **Status:** UNASSESSED.

Protective approach: Provenance checks; independently verify audio/video; preserve metadata without replicating sexual imagery; FTC removal route; Use two-channel verification for synthetic missing-child imagery or purported foreign official communications.. **Immediate action:** Do not publicly identify or punish based only on media; secure victim assistance.

Candidate controls: M02 M05 M07 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S30 S31 S34 S39 S41 S47 S50 (cross-check against the official bibliography before legal adoption).

D05 — Cyberbullying/sextortion

Family: Information & cyber | **Evidence:** Documented class; FTC 2026 guidance | **Status:** UNASSESSED.

Protective approach: Trauma-informed support; victim reporting, rapid platform takedown requests, safe evidence handling and counselor referral. **Immediate action:** Protect affected child; avoid sharing imagery; contact NCMEC/ appropriate agencies.

Candidate controls: M02 M05 M07 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S29 S30 S31 S38 S39 (cross-check against the official bibliography before legal adoption).

D06 — Doxing/privacy abuse

Family: Information & cyber | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Reduce student exposure; private reporting and protected record handling; provide content removal referrals; Add family and custody contact restrictions, student itinerary and reunification data minimization.. **Immediate action:** Protect student, document only necessary details and minimize recirculation.

Candidate controls: M02 M05 M07 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S29 S30 S31 S37 S42 S50 (cross-check against the official bibliography before legal adoption).

D07 — Compromised alerts/PA

Family: Information & cyber | **Evidence:** Scenario supported by CISA cyber risk guidance | **Status:** UNASSESSED.

Protective approach: Separate authenticated command channels; backup alert pathway; test cyber and power failure. **Immediate action:** Provide independent emergency guidance and dispatch update.

Candidate controls: M02 M05 M07 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S33 S35 S40 (cross-check against the official bibliography before legal adoption).

D08 — Ransomware/data theft

Family: Information & cyber | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: MFA; patch known exploited vulnerabilities; offline backups and measured restoration. **Immediate action:** Invoke cyber EOP and preserve manual attendance/communications.

Candidate controls: M02 M05 M07 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S33 S35 S40 (cross-check against the official bibliography before legal adoption).

D09 — Camera or access-control compromise

Family: Information & cyber | **Evidence:** Scenario supported by CISA cyber risk guidance | **Status:** UNASSESSED.

Protective approach: Monitor administrative access; vendor controls; separate life-safety and general IT trust. **Immediate action:** Use human verification and protective fallback.

Candidate controls: M02 M05 M07 M09 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; IT / counsel / evaluator; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S33 S35 S40 (cross-check against the official bibliography before legal adoption).

D10 — Political/religious targeting

Family: Information & cyber | **Evidence:** Foreseeable class | **Status:** UNASSESSED.

Protective approach: Nonideological threat standards; rights review; Protect ideologically targeted persons; apply viewpoint-neutral conduct criteria and evidence-based escalation.. **Immediate action:** Protect targets, investigate conduct.

Candidate controls: M02 M05 M07 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S03 S14 S42 S53 (cross-check against the official bibliography before legal adoption).

D11 — Disinformation/impersonation

Family: Information & cyber | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Verify sender and message origin with trusted contacts; guard against synthetic impersonation; Authenticate government impersonation, foreign official requests and faux legal notices before disclosure.. **Immediate action:** Cross-check before adverse attribution; dispatch on material threat.

Candidate controls: M02 M05 M07 M14 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Privacy officer / counsel; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S28 S34 S42 S47 (cross-check against the official bibliography before legal adoption).

D12 — Remote grooming/coercion

Family: Information & cyber | **Evidence:** Documented federal warning | **Status:** UNASSESSED.

Protective approach: Recognize FBI-reported online coercion networks; trusted reporting, victim safeguarding and specialist referrals; avoid storing abusive imagery. **Immediate action:** Assess imminent harm, protect victim, involve qualified safeguarding/911 if needed.

Candidate controls: M02 M04 M05 M07 M14 M15. **Owners:** District safety / PSAP; BTAM team; PSAP / principal; IT / district safety; Privacy officer / counsel; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S29 S34 S38 S39 (cross-check against the official bibliography before legal adoption).

E01 — Building fire / smoke

Family: Environmental | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Alarms, inspections, egress. **Immediate action:** Evacuate/shelter per fire hazard.

Candidate controls: M02 M03 M15. **Owners:** District safety / PSAP; Nurse / principal; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 S15 (cross-check against the official bibliography before legal adoption).

E02 — Earthquake/structural collapse

Family: Environmental | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Drills; facilities assessment. **Immediate action:** Earthquake protective action then assess.

Candidate controls: M02 M03 M15. **Owners:** District safety / PSAP; Nurse / principal; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 S15 (cross-check against the official bibliography before legal adoption).

E03 — Wildfire/smoke/air quality

Family: Environmental | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: HVAC plans; air-quality thresholds. **Immediate action:** Shelter/evacuate per official guidance.

Candidate controls: M02 M03 M15. **Owners:** District safety / PSAP; Nurse / principal; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

E04 — Flood/landslide/severe rain

Family: Environmental | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Site warnings; routes. **Immediate action:** Relocate and reunify safely.

Candidate controls: M02 M03 M15. **Owners:** District safety / PSAP; Nurse / principal; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

E05 — High wind/lightning/extreme temp

Family: Environmental | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Weather monitoring; shelter. **Immediate action:** Stop outdoor exposure; shelter.

Candidate controls: M02 M03 M15. **Owners:** District safety / PSAP; Nurse / principal; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

E06 — Gas leak / chemical plume / lab spill

Family: Environmental | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Inspection; fire/hazmat plan. **Immediate action:** Protect, evacuate/shelter as indicated.

Candidate controls: M02 M03 M15. **Owners:** District safety / PSAP; Nurse / principal; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

E07 — Water/food contamination

Family: Environmental | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Public-health protocols. **Immediate action:** Isolate source; notify health office.

Candidate controls: M02 M03 M15. **Owners:** District safety / PSAP; Nurse / principal; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

E08 — Infectious disease outbreak

Family: Environmental | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Public-health liaison; sanitation. **Immediate action:** Implement health guidance.

Candidate controls: M02 M03 M15. **Owners:** District safety / PSAP; Nurse / principal; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

E09 — Mass medical crisis/overdose

Family: Environmental | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Mandatory RCW 28A.210.440: accessible campus bleeding-control kit; qualifying contents; 2+ trained employees (more if enrollment >1,000); annual/after-use inventory and replacement; AED/EMS integration.. **Immediate action:** Activate 911/EMS; ensure trained lifesaving aid and accessible kit; replenish and document after use..

Candidate controls: M02 M03 M15. **Owners:** District safety / PSAP; Nurse / principal; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 S27 (cross-check against the official bibliography before legal adoption).

I01 — Power failure

Family: Infrastructure | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Backup alerts, egress and operations. **Immediate action:** Manual continuity and safety checks.

Candidate controls: M02 M07 M15. **Owners:** District safety / PSAP; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

I02 — Telecom/radio outage

Family: Infrastructure | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Independent channels. **Immediate action:** Switch to tested alternative.

Candidate controls: M02 M07 M15. **Owners:** District safety / PSAP; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 S09 S35 S40 (cross-check against the official bibliography before legal adoption).

I03 — HVAC/fire/water failure

Family: Infrastructure | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Maintenance, alternate occupancy. **Immediate action:** Site hazard assessment and relocation.

Candidate controls: M02 M07 M15. **Owners:** District safety / PSAP; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

I04 — Transportation accident

Family: Infrastructure | **Evidence:** Documented class | **Status:** UNASSESSED.

Protective approach: Rosters/driver comms/EMS plans. **Immediate action:** Account for passengers and reunify.

Candidate controls: M02 M07 M15. **Owners:** District safety / PSAP; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

I05 — Supply-chain or vendor failure

Family: Infrastructure | **Evidence:** Foreseeable class | **Status:** UNASSESSED.

Protective approach: Maintenance reserve; alternate suppliers. **Immediate action:** Continuity plan; risk triage.

Candidate controls: M02 M07 M15. **Owners:** District safety / PSAP; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

C01 — Simultaneous hazards

Family: Compound | **Evidence:** Planning class | **Status:** UNASSESSED.

Protective approach: Multi-hazard exercises and decision review. **Immediate action:** Choose location-specific protective actions.

Candidate controls: M02 M05 M07 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S07 (cross-check against the official bibliography before legal adoption).

C02 — False alert masking real incident

Family: Compound | **Evidence:** Documented class; federal guidance | **Status:** UNASSESSED.

Protective approach: Separate real-time occupant protection from dispatch-led credibility checks and escalation. **Immediate action:** Maintain active protection for corroborated danger even if one report is false.

Candidate controls: M02 M05 M07 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S28 S36 (cross-check against the official bibliography before legal adoption).

C03 — Unclassified emerging mechanism

Family: Compound | **Evidence:** Unknown/future | **Status:** UNASSESSED.

Protective approach: Capability-based intake and specialists. **Immediate action:** Protect, document, escalate, reassess.

Candidate controls: M02 M05 M07 M15. **Owners:** District safety / PSAP; PSAP / principal; IT / district safety; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S01 S07 (cross-check against the official bibliography before legal adoption).

T01 — Transnational repression of student or family

Family: Targeted coercion & abduction | **Evidence:** Documented FBI threat class; campus-specific nexus unverified | **Status:** UNASSESSED.

Protective approach: Confidential victim report; FBI referral based on verified conduct; no nationality profiling. **Immediate action:** Protect person, assess specific threat, consult FBI/law enforcement.

Candidate controls: M04 M06 M14 M15. **Owners:** BTAM team; Attendance / principal; Privacy officer / counsel; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S42 S43 S53 (cross-check against the official bibliography before legal adoption).

T02 — Foreign-origin coercion or misuse of school data

Family: Targeted coercion & abduction | **Evidence:** Documented tactic, K-12-specific scenario | **Status:** UNASSESSED.

Protective approach: Verify foreign official requests, MFA, least-privilege records and monitored exports. **Immediate action:** Reject unauthenticated request; secure student data and counsel review.

Candidate controls: M04 M06 M14 M15. **Owners:** BTAM team; Attendance / principal; Privacy officer / counsel; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S42 S43 S50 (cross-check against the official bibliography before legal adoption).

T03 — Organized-crime recruitment, debt/extortion or forced courier activity

Family: Targeted coercion & abduction | **Evidence:** Documented recruitment/coercion class; campus nexus unverified | **Status:** UNASSESSED.

Protective approach: Child safeguarding; education, counselor, specialist and reporting support; prohibit investigative profiling. **Immediate action:** Safeguard potentially exploited child; notify authorities per law.

Candidate controls: M04 M06 M14 M15. **Owners:** BTAM team; Attendance / principal; Privacy officer / counsel; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S44 S45 S51 (cross-check against the official bibliography before legal adoption).

T04 — Minor labor/sex trafficking exploitation

Family: Targeted coercion & abduction | **Evidence:** Established federal school guidance | **Status:** UNASSESSED.

Protective approach: Training and disclosure pathway per Education guidance; mandatory-reporting review. **Immediate action:** Protect victim and make appropriate professional report.

Candidate controls: M04 M06 M14 M15. **Owners:** BTAM team; Attendance / principal; Privacy officer / counsel; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S45 S49 S52 (cross-check against the official bibliography before legal adoption).

T05 — Physical child abduction or luring at school/transit

Family: Targeted coercion & abduction | **Evidence:** Documented general threat; context-specific | **Status:** UNASSESSED.

Protective approach: Attendance accountability, release controls, supervised pickup, verified transport changes. **Immediate action:** 911 for credible missing/abducted child; coordinate reunion and evidence.

Candidate controls: M04 M06 M14 M15. **Owners:** BTAM team; Attendance / principal; Privacy officer / counsel; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S46 (cross-check against the official bibliography before legal adoption).

T06 — Custodial interference or unauthorized release

Family: Targeted coercion & abduction | **Evidence:** Documented WA statutory category | **Status:** UNASSESSED.

Protective approach: Current orders and pickup authorizations, backup decision authority, confidential exceptions. **Immediate action:** Prevent unauthorized handoff; seek counsel/law enforcement where warranted.

Candidate controls: M04 M06 M14 M15. **Owners:** BTAM team; Attendance / principal; Privacy officer / counsel; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S46 S48 (cross-check against the official bibliography before legal adoption).

T07 — Virtual kidnapping and synthetic ransom claims

Family: Targeted coercion & abduction | **Evidence:** Specific FBI PSA 2025-12-05 | **Status:** UNASSESSED.

Protective approach: Independent child-safety verification via trusted channel; preserve original material. **Immediate action:** Assess actual danger promptly; contact dispatch/FBI; no public allegation.

Candidate controls: M04 M06 M14 M15. **Owners:** BTAM team; Attendance / principal; Privacy officer / counsel; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S47 (cross-check against the official bibliography before legal adoption).

T08 — Nonviolent political/reputational or economic coercion

Family: Targeted coercion & abduction | **Evidence:** Documented broad tactics; local case hypothetical | **Status:** UNASSESSED.

Protective approach: Viewpoint-neutral threat intake, origin/authentication checks, civil-rights and victim support. **Immediate action:** Prevent ongoing harassment/data release; distinguish protected dissent.

Candidate controls: M04 M06 M14 M15. **Owners:** BTAM team; Attendance / principal; Privacy officer / counsel; Board / auditor. **Minimum evidence:** Campus applicability, actual coverage, authorized safe demonstration, recorded failures, independent sign-off and retest date.

Inherited source labels: S42 S50 S51 (cross-check against the official bibliography before legal adoption).

13. Protective capability assurance catalogue

Use: A control is not validated merely because it appears on a purchase order, has a vendor demonstration, or was discussed in a tabletop. Independent reviewers record site, relevant population, preapproved test scope, results, accessibility and change-triggered retest. **No aggregate score can override failure of accessible egress, a mandated medical control, or a critical alert channel.**

M01 — Access and egress

Priority: P0 | **Owner:** Facilities / principal | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Physical doors, safe egress, drill coverage.

Invalidating failure: Observed failure, access exceptions, accessibility complaint. **Life-safety gate:** Review for critical life-safety function.

M02 — Emergency notification and PSAP

Priority: P0 | **Owner:** District safety / PSAP | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Dual route alerts, dispatch contact, logs.

Invalidating failure: Spoofed command; disconnected classroom. **Life-safety gate:** Review for critical life-safety function.

M03 — Bleeding-control kits

Priority: P0 | **Owner:** Nurse / principal | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Kit content, expiration, trained staff, inventories.

Invalidating failure: Missing supplies or trained personnel. **Life-safety gate:** Review for critical life-safety function.

M04 — BTAM and student safeguarding

Priority: P0 | **Owner:** BTAM team | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Qualified team, review and child services.

Invalidating failure: False attribution, victim re-traumatization. **Life-safety gate:** Review for critical life-safety function.

M05 — False-report and swatting protocol

Priority: P0 | **Owner:** PSAP / principal | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Parallel protect-and-verify practice.

Invalidating failure: Discipline by accusation; unnecessary disclosure. **Life-safety gate:** Review for critical life-safety function.

M06 — Visitor and student release

Priority: P0 | **Owner:** Attendance / principal | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Custody restrictions, visitor ID, verification logs.

Invalidating failure: Wrongful denial; unsafe release. **Life-safety gate:** Review for critical life-safety function.

M07 — School cyber / alerts resilience

Priority: P1 | **Owner:** IT / district safety | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: MFA, backups, communications segregation.

Invalidating failure: False instructions; data exposure. **Life-safety gate:** Review for critical life-safety function.

M08 — Entry screening

Priority: P1 | **Owner:** Facilities / counsel | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Legal basis; throughput/false-alert test.

Invalidating failure: Disparate treatment, blocked egress. **Life-safety gate:** Review for critical life-safety function.

M09 — AI camera detections

Priority: P2 | **Owner:** IT / counsel / evaluator | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Independent annotated tests, baseline, logs.

Invalidating failure: False positives and missed events. **Life-safety gate:** Review for critical life-safety function.

M10 — SRO/authorized armed coverage

Priority: P2 | **Owner:** Law enforcement / district | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Authority, recurrent qualifications, dispatch ID.

Invalidating failure: Misidentification; injury; disciplinary harm. **Life-safety gate:** Review for critical life-safety function.

M11 — Less-lethal and force governance

Priority: P2 | **Owner:** Agency / counsel | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Authorized equipment/training, review.

Invalidating failure: Injury, unauthorized uses. **Life-safety gate:** Review for critical life-safety function.

M12 — Detection canine services

Priority: P2 | **Owner:** Specialist handler / legal | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Trained handler, defined search purpose, accommodations.

Invalidating failure: False alert; bite; disability impact. **Life-safety gate:** Review for critical life-safety function.

M13 — Counter-UxS observation/referral

Priority: P2 | **Owner:** District / specialized agency | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Passive observations, authority check.

Invalidating failure: Unlawful interdiction; false attribution. **Life-safety gate:** Review for critical life-safety function.

M14 — FERPA information sharing

Priority: P0 | **Owner:** Privacy officer / counsel | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Need and legal basis; emergency recipient log.

Invalidating failure: Overdisclosure; exercise misuse. **Life-safety gate:** Review for critical life-safety function.

M15 — Quarterly independent review

Priority: P1 | **Owner:** Board / auditor | **Current state:** UNASSESSED.

Representative conditions: Representative in-scope campus conditions.

Evidence for acceptance: Evidence tier and remediation log.

Invalidating failure: Unassessed listed as passed. **Life-safety gate:** Review for critical life-safety function.

14. Washington compliance and legal approval checklist

Legal hierarchy: Federal constitutional protections control over inconsistent state practice. Washington requirements may provide additional protections. This is a planning crosswalk, not legal advice. Counsel must confirm applicability, updated text and evidence before declaring legal compliance. **Empty records do not establish either passing compliance or a proven violation.**

C01 — Safe school plan incl accessibility and reunification

Authority: W01 | **Responsible:** District safety / principal | **Priority:** P0.

Minimum verification evidence: Approved current campus plan, accessible alternatives, reunification contacts. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C02 — Monthly drills while students in session

Authority: W01 | **Responsible:** Principal | **Priority:** P0.

Minimum verification evidence: Drill dates, times, type, accessible participation, exceptions. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C03 — Principal incident-command certification

Authority: W01 | **Responsible:** District safety | **Priority:** P0.

Minimum verification evidence: Principal current ICS certificate and appointed substitute plan. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C04 — Temporary/substitute staff notification

Authority: W01 | **Responsible:** Principal / HR | **Priority:** P0.

Minimum verification evidence: Documented briefing method and sample receipt. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C05 — Emergency response system and partner coordination

Authority: W02 | **Responsible:** District / 911 PSAP | **Priority:** P0.

Minimum verification evidence: Selected qualifying capability plus collaborative planning and safe exercise evidence. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C06 — Bleeding-control equipment per campus

Authority: W03 | **Responsible:** School nurse / facilities | **Priority:** P0.

Minimum verification evidence: Physical kit placement, required contents, accessibility. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C07 — Bleeding-control training coverage

Authority: W03 | **Responsible:** School nurse / HR | **Priority:** P0.

Minimum verification evidence: Enrollment, trained employee count, course completion records. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C08 — Bleeding-control inspections and replacements

Authority: W03 | **Responsible:** School nurse | **Priority:** P0.

Minimum verification evidence: Annual and after-use inventory/replenishment logs. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C09 — Behavior-based multidisciplinary threat assessment

Authority: W04 | **Responsible:** BTAM director | **Priority:** P0.

Minimum verification evidence: Team composition, case-processing safeguards, referral outcome review. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C10 — Notice and malicious-report provisions

Authority: W05 | **Responsible:** Counsel / principal | **Priority:** P0.

Minimum verification evidence: Adopted policy and balanced reporting/attribution safeguards. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C11 — Security staff duties and complaint procedure

Authority: W06 | **Responsible:** Principal / counsel | **Priority:** Conditional.

Minimum verification evidence: Current role and complaint policy; family communication. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C12 — Annual safety and security provider agreement

Authority: W07 | **Responsible:** District counsel | **Priority:** Conditional.

Minimum verification evidence: Current annually adopted agreement, community process and training terms. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C13 — Security staffing / force / complaints reporting

Authority: W08 | **Responsible:** District compliance | **Priority:** Conditional.

Minimum verification evidence: Annual data submission confirmation and scope check. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C14 — FERPA emergency disclosure documentation

Authority: F25 L02 | **Responsible:** Privacy officer | **Priority:** Conditional.

Minimum verification evidence: Student-record entry of articulable/significant threat and each recipient. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

C15 — HSEEP-style exercise evidence and corrections

Authority: F29 F30 | **Responsible:** District safety / evaluator | **Priority:** Proposed.

Minimum verification evidence: Exercise objectives, evaluator sheets, AAR/IP, retest tickets. **Status:** UNASSESSED; district counsel and independent reviewer to determine applicability and closure.

15. Representative field sampling, exercises and remediation

District teams must preapprove all tests and use fictional inputs. Never trigger actual emergency dispatches, obstruct egress, deploy weapons or employ live coercive or harmful scenarios. Detailed campus geometry, patrol schedules and sensor placement belong in restricted local records. The following samples are a minimum proposed coverage set, not a certification of readiness.

S01 — Typical classroom

Conditions: Standard staffed hours. **Observable outcome:** Alert received/understood; safe action. **Safe scope:** At least one ordinary school-day sample.

S02 — Portable or remote teaching space

Conditions: School day. **Observable outcome:** Fallback and accessible warning. **Safe scope:** Include spaces separate from main building.

S03 — Sports or outdoor gathering

Conditions: After-school activity. **Observable outcome:** Accessible alert, staff/PSAP communication. **Safe scope:** Include changing ambient noise.

S04 — Transportation / loading

Conditions: Arrival/departure. **Observable outcome:** Accountability and warning receipt. **Safe scope:** Coordinate with transportation; no simulated danger.

S05 — Accessible route / accommodation

Conditions: Ordinary use. **Observable outcome:** Equal warning and protective alternatives. **Safe scope:** Participant accommodation and privacy approved.

S06 — Approved degraded-IT exercise

Conditions: Controlled test only. **Observable outcome:** Authenticated fallback without production interruption. **Safe scope:** IT and dispatch signoff; no real 911 message.

S07 — Independent false-report verification

Conditions: Fictional tabletop. **Observable outcome:** Parallel protection + evidence checks + correction. **Safe scope:** Use fictional identities, no student records.

S08 — Medical kit and trained-staff coverage

Conditions: Unannounced administrative inventory, not emergency. **Observable outcome:** Physical contents and staffing records. **Safe scope:** No realistic injury simulation around children.

Independent evidence and improvement-plan record

Every sampled observation should capture a unique ID, site and date; written authorization; objective and expected protective effect; actual conditions; sample denominator; delivered versus missed warnings, false actions, measured interval and uncertainties; accessibility coverage; assessor and independent witness; evidence reference; any legal/physical harm; corrective action owner; due date; and retest result. **Missing data are UNKNOWN.**

After a failure, record a temporary protection, pause unsafe optional capabilities when appropriate, report material gaps to the board without revealing exploitable details, and retest after corrective work. Closure requires independent evidence of the corrected function under relevant conditions. [F29–F30]

16. Annotated research bibliography and further reading

Source-currency note: The 50-item inherited source ledger retains Version 11.3 entries and adds FEMA Exercise Evaluation Guides [F30] and U.S. Department of Education emergency-planning guidance [F31]. The central Washington safe-school, emergency-system, bleeding-control, security-staff and malicious-report statutes, CISA school-security scope, federal EOP planning, FERPA FAQ and FEMA exercise doctrine were reviewed against official government pages. The remaining inherited documents and links have **not** all received fresh line-by-line review. Confirm the live law and regulations before adoption. Agency guidance and research are not binding legal authority unless another rule incorporates them.

How to use it. Each entry identifies a primary government source, publication date or current status, authority class and specific research application. Read the full text before citing a mandate; a federal guidance document is not necessarily binding. The links below lead to agency or legislature publications. The source set is a targeted research starting point rather than a claim of exhaustive legal review. Newly added technical and privacy sources F24–F28 have been checked against the named agency pages; other links remain subject to periodic link and currency review.

National learning networks and federal recommendations

N01 · FY 2023 STOP School Violence Training and Technical Assistance Program
DOJ Bureau of Justice Assistance · 2023 · Federal program presentation.
Describes peer-to-peer learning sites, communities of practice, training tools, and dissemination of program results. This is a precedent, not confirmation of a newly established nationwide forum.

N02 · STOP School Violence Program Overview
DOJ Bureau of Justice Assistance · Federal program guidance.
Describes evidence-based program expectations and distinctions between allowable program activities and prohibited uses of certain funding sources. Grants or federal participation are not guaranteed.

N03 · K–12 School Security Guide, Third Edition
CISA · 2022 · Federal operational guidance.
Supports site-specific vulnerability assessment and layered protective planning; useful as a common taxonomy for independent peer review.

Federal school-security doctrine

F01 · K-12 School Security Guide, Third Edition
CISA · 2022 · Federal guidance.
Primary framework for layered physical-security design, site-specific assessments, physical-security elements, and decision sequencing; not a mandate to buy particular equipment.

F02 · Enhancing School Safety Using a Threat Assessment Model: An Operational Guide
U.S. Secret Service NTAC · 2018 · Federal operational guidance.

Foundational behavioral threat assessment and management (BTAM) methodology; explicitly rejects a demographic or personality attacker profile.

F03 · Protecting America's Schools: A U.S. Secret Service Analysis of Targeted School Violence
U.S. Secret Service NTAC · 2019 · Federal research study.
Retrospective case analysis informing concern identification, intervention pathways, and reporting design; descriptive patterns are not deterministic predictors.

F04 · Averting Targeted School Violence
U.S. Secret Service NTAC · 2021 · Federal research study.
Case-based analysis of disrupted plots. Supports multidisciplinary intervention and the importance of early reporting and follow-up.

F05 · Improving School Safety Through Bystander Reporting: K-12 Toolkit
CISA / U.S. Secret Service · 2023 · Joint federal guidance.
Design and improvement of reporting channels, communications, trust, triage, and pathways to intervention; complement with separate anti-retaliation controls.

F06 · Anonymized Threat Response Guidance Toolkit
CISA · 2024 · Federal guidance.
Balanced verification and school response to anonymous threats, hoaxes, and swatting; especially relevant to preventing adverse effects from deceptive reports.

F07 · Guide for Developing High-Quality School Emergency Operations Plans
ED / DHS / DOJ / FBI / FEMA / HHS · 2013 · Interagency planning guidance.
End-to-end school EOP methodology: collaboration, scenario planning, functional annexes, training, exercises, and recovery.

F08 · School Security Guide Companion for School-Based Law Enforcement and School Resource Officers
CISA · 2024 · Federal guidance.
Defines high-level roles for law enforcement/SROs in physical-security assessment and school partnerships; does not replace state law and local agreements.

F09 · Emergency Planning: Federal School EOP Resources
U.S. Department of Education · Reviewed 2026-03-05 · Federal resource portal.
Central federal portal to school planning, district teams, cyber annexes, recovery, and age-appropriate drills.

F29 · Homeland Security Exercise and Evaluation Program (HSEEP) Policy and Guidance
FEMA · 2020 doctrine; official current resource portal · Federal exercise guidance.
Exercise program planning, objective-based evaluation and after-action/improvement planning. Use to develop local acceptance tests; does not establish that a school has been certified or that an exercise outcome generalizes beyond conditions tested.

F24 · K-12 School Security Assessment Tool: Technical Appendix
CISA · 2022 · Federal technical guidance.
Explains school-specific scenario selection, detection/delay/response measures and dependency assessment. Use for integrated capability tests rather than assuming individual product efficacy.

F28 · What Is a Behavioral Threat Assessment in School?
U.S. Secret Service NTAC · 2025 · Official fact sheet.
Clarifies that school BTAM focuses on concerning behaviors, multidisciplinary evaluation and support; it is not a criminal investigation, disciplinary process, or demographic attacker profile.

Federal risk and emerging threats

F11 · Guidance to Educational Institutions on Swatting Threats, GEN-26-04
U.S. Departments of Education and Justice · 2026-09-25 · Nonbinding federal guidance.
Newest cross-agency swatting guidance used for district-dispatch precoordination, urgent protection, verification, and cautious communication.

F12 · Violent Online Networks Targeting Children and Vulnerable Populations
FBI Philadelphia · 2026-09-23 · Federal public warning.
Documents child grooming, coerced harmful behavior, and online exploitation. Agency warning does not establish a campus-specific incident.

F13 · Criminals Using Altered Proof-of-Life Media in Virtual Kidnapping Scams
FBI · 2025-12-05 · Federal public warning.
Supports immediate independent child-welfare checks and verification of ransom claims that may contain altered images or video.

F14 · FTC Begins Enforcing the TAKE IT DOWN Act
FTC · 2026-05-19 · Federal law implementation notice.
Explains removal-request process for covered platforms and 48-hour response obligation for valid requests involving nonconsensual intimate images.

F15 · Protecting Our Future: Safeguarding K-12 Organizations from Cybersecurity Threats
CISA · 2023-01 · Federal cybersecurity guidance.
Practical cyber priorities such as MFA, known vulnerability remediation, backups, and incident planning for school operations.

F16 · Cybersecurity Guidance for K-12 Technology Acquisitions
CISA · 2023-08 · Federal procurement guidance.
Secure-by-design procurement requirements: logs, MFA, patching, no default passwords, least privileges, vulnerability disclosure.

F17 · Artificial Intelligence Risk Management Framework 1.0
NIST · 2023-01-26 · Voluntary risk-management framework.
Govern/Map/Measure/Manage framework for testing AI-alert accuracy, false positives, privacy, fairness, oversight, and lifecycle governance.

F18 · Interagency Legal Advisory on UAS Detection and Mitigation Technologies
FAA / DOJ / DHS / FCC · 2020-08-17 · Interagency legal advisory; check new law.
Historical baseline regarding legal hazards of C-UAS detection and interdiction. Must be read in light of post-2025 conditional law-enforcement authority.

F19 · SAFER SKIES Act and Qualified SLTT Counter-UAS Certification (testimony)
FBI / U.S. DOJ · 2026-04 · Federal implementation testimony.
Explains limited federally conditioned training, certification, and task-force pathways for law-enforcement counter-UAS actions; not general school authority.

F20 · Counter UAS Resource and Legal Advisory Portal
FAA · Living website · Federal regulatory resource.
Current FAA entry point to interagency counter-UAS guidance and aircraft/spectrum regulatory boundaries.

F21 · Detection Canines: National Canine Program
ATF · Living website · Federal specialized capability guidance.
Defines accredited explosives/accelerant-detection canine capability and access pathways for qualifying law-enforcement agencies; separate from tactical bite/apprehension use.

F22 · FERPA Health or Safety Emergency Exception: FAQ
U.S. Department of Education · Living website · Federal privacy interpretation.
Limits education-record disclosure to genuine actual/impending/imminent emergencies; not a blanket justification for exercises or surveillance.

F23 · Service Animals and Assistance Animals
U.S. Department of Justice · Updated 2024-11-04 · Federal civil-rights guidance.
Supports accommodation planning around canine security programs and distinguishes working security dogs from protected service animals.

F25 · Recording FERPA emergency disclosures
U.S. Department of Education, Student Privacy Policy Office · Current official FAQ · Interpretive compliance guidance.
Explains the requirement to record the articulable and significant threat supporting emergency disclosure and the recipients. Check actual law and counsel's interpretation for local implementation.

F26 · FERPA and emergency preparedness exercises
U.S. Department of Education, Student Privacy Policy Office · Current official FAQ · Interpretive compliance guidance.
Clarifies that the health-and-safety exception does not permit disclosure simply for exercise planning. Use synthetic exercise cases.

F27 · AI RMF Core: Measure
NIST · AI RMF 1.0 framework · Voluntary technical guidance.
Addresses validation, safety, resilience, accountability and contextual interpretation of AI systems. Use for camera/analytic tool test plans and ongoing monitoring, not claims of guaranteed detection.

Constitutional and federal law

L01 · U.S. Constitution, Article VI Supremacy Clause; First, Fourth and Fourteenth Amendments
National Archives · Founding text · Binding federal constitutional law.
Federal constitutional protections prevail over conflicting state policy; provides baseline for speech, searches, force, due process, and equal protection.

L02 · Family Educational Rights and Privacy Act, 20 U.S.C. § 1232g
U.S. Code (House) · Current code · Binding federal statute.
Education-record access and disclosure rules; pair with the Department of Education emergency exception FAQ for operations.

L03 · Mahanoy Area School District v. B. L., No. 20-255
U.S. Supreme Court · 2021-06-23 · Binding judicial precedent.
Off-campus student speech retains First Amendment protection; fact-specific risk and disruption analysis required before action.

L04 · Take It Down Act Implementation Guidance
FTC · 2026-05 · Federal statute guidance.
Describes covered platform duties and procedures for removal of nonconsensual intimate imagery including synthetic material.

F30 · Federal school-security doctrine · FEMA (living site). *Exercise Evaluation Guides (EEGs) — HSEEP Resources.* **GUIDANCE.** Official: https://preptoolkit.fema.gov/web/hseep-resources/eegs. Use to structure objective-linked observations, documented capability targets, evaluation and corrective actions; does not certify a campus.

F31 · Federal school-security doctrine · U.S. Department of Education (reviewed March 5, 2026). *Emergency Planning.* **GUIDANCE.** Official: https://www.ed.gov/teaching-and-administration/safe-learning-environments/school-safety-and-security/emergency-planning. Use to distinguish all-hazards EOP planning, exercises and recovery from CISA's narrower crime/violence physical-security guide.

Washington implementation guidance

F10 · Comprehensive Safety Planning
Washington OSPI · Living website · State implementation guidance.
Maps prevention, protection, mitigation, response, and recovery to Washington comprehensive safety plans and functional annexes.

Washington statutes and regulations

W01 · RCW 28A.320.125 — Safe School Plans and Drills
Washington Legislature · Current · Binding Washington law.

Requires district plans, protective functional responses, accessibility, reunification and coordination; use as a compliance crosswalk.

W02 · RCW 28A.320.126 — Emergency Response System (Alyssa's Law)
Washington Legislature · Current (2025 revision) · Binding Washington law.
Requires schools to collaborate with public safety answering points and law enforcement on qualifying response-system capabilities.

W03 · RCW 28A.210.440 — Bleeding Control Equipment and Training
Washington Legislature · Effective 2026–27 school year · Binding Washington law.
Sets accessible campus equipment, specific contents, two trained employees minimum, higher staffing for schools above 1,000, and inventory after use/annually.

W04 · RCW 28A.320.123 — School-Based Threat Assessment Program
Washington Legislature · Current · Binding Washington law.
Requires behavior- and circumstance-based multidisciplinary assessment and prohibits suspension or expulsion merely for referral or assessment.

W05 · RCW 28A.320.128 — Threat Notification and Knowingly False Reports
Washington Legislature · Current · Binding Washington law.
Prescribes threat-notification policies and criminalizes certain intentionally and maliciously or bad-faith knowingly false threat notifications.

W06 · RCW 28A.320.124 — School Safety and Security Staff
Washington Legislature · Current · Binding Washington law.
Requires clarity about security duties and student conduct; excludes SROs from formal student discipline responsibilities.

W07 · RCW 28A.320.1242 — Agency and Contractor Agreements
Washington Legislature · Current · Binding Washington law.
Annual reviewed agreements, training documentation, placement/performance procedures, and parent/student/community involvement.

W08 · RCW 28A.320.1241 — Security Staffing and Force Incident Reporting
Washington Legislature · Current · Binding Washington law.
Annual data on school-security staffing, use-of-force incidents, arrest/discipline, and complaints; important accountability baseline.

W09 · RCW 9.41.280 — Dangerous Weapons at Schools
Washington Legislature · Current · Binding Washington law.
School weapon-possession prohibition and enumerated exceptions. Exception alone does not authorize a specific force deployment.

W10 · RCW 10.120.020 — Permissible Peace Officer Use of Force
Washington Legislature · Current · Binding Washington law.
Officers' force limits, de-escalation, deadly-force restrictions and special safeguards. Distinct from noncommissioned personnel authority.

W11 · RCW 9A.16.050 — Justifiable Homicide by Other Persons
Washington Legislature · Current · Binding Washington law.
Self-defense and defense-of-others statutory circumstances; requires counsel/agency review before any district policy references.

W12 · RCW 28A.600.015 — Student Discipline and Due Process
Washington Legislature · Current · Binding Washington law.
Enabling law for substantive and procedural protections in school suspension/expulsion and emergency removal.

W13 · WAC 392-400-510 — Emergency Removal Limits
Washington Legislature · 2025 revision · Binding Washington rule.

Requires sufficient cause of immediate/continuing danger or extreme disruption; limits duration and requires superintendent reporting.

W14 · WAC 392-400-515 — Emergency Removal Notice
Washington Legislature · 2025 revision · Binding Washington rule.
Parent/student notification, written reasons, timing and process for emergency removals.

W15 · Washington Constitution, Article I, Section 2
Washington Legislature · Current · Binding state constitutional law.
Expressly recognizes the U.S. Constitution as supreme law of the land; state provisions can furnish further protections.

Document controls and provenance

Version: 17.0 Revision 1, October 26, 2026. **Supersedes:** all prior stand-alone advisory and annex editions; does not assert that districts have adopted or exercised any control. **Consolidated register:** All 56 threat vectors, control mappings and field-verification criteria are included in this document. **Scope:** public K–12 Washington; private, tribal and charter variations and new laws require independent jurisdiction-specific review. **Update trigger:** material federal or Washington statutory changes, published agency guidance, independent validation findings, major incidents with verified generalizable lessons, or new threats that do not fit existing controls. **Legal review:** mandatory before adoption of screening/search, privacy disclosures, authorized armed personnel, less-lethal use, canine force, or UAS interdiction.

Research and source-maintenance protocol

For each material change to this advisory, the reviewing team should retain a *one-page evidence record* recording the following:

- **Primary publication and date.** Link to the agency or legislature itself, note the date of the document and any subsequent amendment; archive a permitted copy or durable reference.
- **Kind of authority.** Identify constitutional rule, current statute/regulation, binding decision, nonbinding guideline, research study, public warning or planning hypothesis. Do not let an agency publication silently become a claimed legal requirement.
- **Affected population and place.** Distinguish national incidents, Washington-wide law, a verified local episode and a hypothetical exercise. Do not extrapolate from one attack to prevalence across schools.
- **Decision implications.** State the exact hazard, the existing register entry, candidate countermeasure and accountable decision-maker; identify any existing controls that may already mitigate it.
- **Effectiveness and failure modes.** Note study design, comparison group, measured effect, confidence limits, adverse consequences, implementation cost and vendor dependence; classify unsupported products as unvalidated.
- **Rights and legal approval.** Record anticipated effects on speech, privacy, disability accommodations, searches, due process, emergency disclosure and force authority; obtain written counsel/agency concurrence as appropriate.
- **Change acceptance.** Require an independently reviewed test plan, measurable acceptance criterion, fallback method, redress path and explicit date for reevaluation before calling a change effective.

Independent evidence gap: Government practice guides explain how to design programs, but they do not by themselves establish a quantified reduction in casualty rates from armed staff, canine teams, AI cameras or weapons scanners. Seek comparative studies and reliable local measurement before approving these as 'proven' school-safety improvements.

Suggested review cadence: check binding Washington sources each quarter and before a district vote; review CISA, NTAC, FBI, FAA, FTC, ED and NIST sources after a material announcement; reconfirm local capability through annual exercises and after significant incidents or infrastructure changes. Monitor for relevant updates without treating every bulletin as grounds for additional surveillance or procurement.

Courtesy of NERVOSYS, LLC · Contact: Dr. Adam Erickson · Independent research; not an official government publication.

17. Technology acceleration, attacker-defender adaptation and cybersecurity assurance

Mandatory crosscutting safety discipline · G0 + ASCS-00 through ASCS-04

Policy direction. Do not freeze school defense around static technologies. Establish a rolling integration program that scans for capabilities, uses controlled proof-of-concept trials, tests against realistic failure modes, and incorporates validated improvements. Treat rapid attacker-defender co-evolution as an operational planning assumption, not as evidence that a specific novel product is effective. Procurement speed does not substitute for independent evidence or legal authority.

Cyber-physical nonnegotiables: No connected technology may control the legality of force; no remote command may bypass life-safety egress requirements; no ordinary cloud outage may prevent emergency communications; no device may collect or share unnecessary student or firearm-owner information; and no school may claim operational validation without independent safety, cybersecurity, privacy, and accessibility reviews.

17.1 Continuous technology integration cycle

Stage	Decision and owner	Evidence before next stage
1 / Sense	Safety lead identifies a defined gap and candidate solution	Specific hazard, alternatives, preliminary benefits/ harms, legal boundary
2 / Isolate	IT/OT owner tests in a segmented lab without student data	Architecture, threat model, vendor update and disclosure terms
3 / Challenge	Independent testers perform authorized tabletop, resilience and usability tests	False positives, accessibility, outage behavior, cyber test artifacts, rollback
4 / Pilot	District conducts bounded opt-in/site-authorized trials	Human oversight, consent where applicable, independent fire/privacy sign-off
5 / Monitor	Security operations records real field failure and drift	Metrics, incidents, patches, civil-rights complaints, false-alarm review
6 / Adapt / Retire	Governance board approves improvement or decommission	Documented corrective action, reevaluation date, safe uninstall or rollback

17.2 Treat cybersecurity as a life-safety hazard

Threat model deliberate cyber intrusion, accidental misconfiguration, insider abuse, supply-chain compromise, communication loss, malicious or deceptive sensor inputs, ransomware, and vendor abandonment. Systems in scope include camera networks, analytics, acoustic detection, door/access control, emergency paging and mass notification, radio/cloud relay, dispatch links, visitor systems, robotics, and digital records. Protect confidentiality, integrity and availability, but place life safety and lawful human control above convenience.

17.3 Required cybersecurity controls and acceptance tests

Control	Required behavior	Acceptance method
CY-01 / Inventory	Identify every networked critical asset and support dependency	Physical-to-logical inventory reconciliation
CY-02 / Vendor assurance	Secure defaults, lifecycle support, vulnerability reporting and updates	Contract and product dossier review
CY-03 / Isolation	Separate safety systems from student networks; least-privilege admin	Authorized segmentation and MFA checks
CY-04 / Safe fallback	Free egress and manual alerting survive outages and cyber incidents	Coordinated non-disruptive simulated outage

Control	Required behavior	Acceptance method
CY-05 / Alert integrity	Authenticate critical signals; verify before coercive intervention	False-positive / delayed-message tabletop
CY-06 / Maintenance	Known-risk patching, change records, rollback capability	Staged patch and restoration demonstration
CY-07 / Privacy	Minimize records, restrict access, prevent surveillance creep	Data-flow and rights audit
CY-08 / Recovery	Maintain cyber incident plan, tested backups and recovery pathways	Incident exercise and restoration review
CY-09 / Adversarial QA	Independent, authorized challenge-testing in safe test boundaries	Test approval, evidence, retest documentation
CY-10 / Lifecycle	Retire unsafe technology, preserve human authority and override	Annual approval and retirement drill

17.4 Operational integration by subsystem

- **Detection (ASCS-01):** sensor confidence and provenance, model drift, tamper detection and independent human verification; no automatic use-of-force authorization.
- **Doors and barriers (ASCS-02):** local/mechanical exit remains code-compliant; failed network and compromised controller have safe, reviewed behaviors. Never install a software-only lock-in.
- **Canines (ASCS-03):** digital support tools are optional and do not replace certified handlers, humane operation or constitutional constraints. No unverified digital trigger justifies a search.
- **Professional responders (ASCS-04):** secure communications and positive incident verification; authorized human decisions remain reviewable and bound to law.
- **Medical response:** paper/offline casualty procedures, redundant radios and physically available supplies if software systems fail.
- **Prevention / G0:** secure-storage participation data is not a firearm-owner registry; privacy separation and independent redress are mandatory.

17.5 Governance, adversarial testing and public accountability

Develop a NIST CSF 2.0 profile under *Govern, Identify, Protect, Detect, Respond, Recover*. Require board-approved risk acceptance for critical exceptions, a separate cyber incident commander, and transparent aggregate outcomes. Authorized red-team exercises must use written scope, supervised laboratory or off-hours conditions, and fail-safe halt procedures. Do not publish device passwords, precise school-network topologies or exploitation details in the public repository.

17.6 Deployment gates and evidence limits

Hard stop: deploy no critical connected security system without an owner, documented maintenance lifetime, safe offline behavior, a credible cyber response plan, and independent validation of fire/accessibility and rights protections. A successful pilot or pen-test does not prove that school shootings have been prevented. Maintain a continuous evidence register and reassess after material incidents, vulnerabilities, or product updates.

Reference basis: NIST CSF 2.0 (2024); NIST SP 800-82 Rev. 3 (2023); NIST SP 800-218 (2022); CISA K-12 cybersecurity guidance. NIST SP 800-82 Rev. 4 is a public draft as of October 2026 and is not treated here as a final standard.

18. Threat-driven protective technology: acquisition, evidence and adaptation

Version 17.0 Revision 1 AI assurance carried forward · 26 October 2026. This supersedes any interpretation of Section 17 that technology should be adopted merely because it is new. Its adoption, scope and pace are functions of established and credibly emerging threats, site exposure, measured control gaps, and defensible evidence.

System-level decision rule. *Threat signal → corroboration → exposure and baseline → protective gap → least intrusive alternatives → controlled test → independent life-safety, legal and cybersecurity gates → limited deployment → reassessment or retirement.* Early experimentation is desirable; uncontrolled deployment is not.

18.1 Threat intelligence and confidence levels

Maintain a dated, owner-signed threat register. Label each signal **established** (documented pattern with credible evidence), **emerging** (new capability or tactic supported by credible evidence but uncertain prevalence), or **hypothesis** (low-confidence scenario for horizon scanning only). Record the source, applicable population, time horizon, exposure relevance, contradictory evidence, uncertainty and privacy constraints. Avoid presenting national incidents as campus-specific probability. Do not use ideological identity, lawful firearm ownership or protected speech as a risk proxy.

18.2 Technology must answer a specific protective question

Before considering any product, identify what may fail in a mass-shooting prevention or protection pathway, what existing safeguards do, what observable improvement is needed, and what non-technological alternative may be more effective. Prefer practical improvements in access prevention, trusted reporting, verified alerts, code-compliant barriers, accessible evacuation and bleeding control when these close the gap. New detection devices, automated analytics, canine teams and advanced responders remain optional unless separately supported by evidence and legal authorization.

Threat / maturity	Protective gap	Potential response, including non-tech	Required evidence or hold point
TD-01 Established	Youth access to unsecured firearms	Access prevention and voluntary storage support	Caregiver education, discounted safe storage, lawful temporary storage referrals *Test:* Independent privacy audit; anonymous pre/post storage practices; no firearm-owner registry
TD-02 Established	Credible threats missed or mischaracterized	Human triage, consistent referrals, fair-process corrections	Accessible reporting pathways, multidisciplinary threat assessment, human review *Test:* Timeliness, false-report handling, documentation, appeals and non-retaliation
TD-03 Established	Delayed warnings or unsafe protective action	Notification, accessible egress and immediate protective action	Redundant alerts, code-approved doors, accessibility plans, manual fallback *Test:* Timed authorized drills, fire/AHJ and disability-access approval, degraded-mode testing
TD-04 Established / evolving	Compromised connected safety technology	Integrity and availability of alert/access systems	Segmentation, authenticated alerts, updates, backups and manual operation *Test:* Authorized secure-environment tests; verified egress and response continuity during outage

Threat / maturity	Protective gap	Potential response, including non-tech	Required evidence or hold point
TD-05 Emerging technique	Fabricated or manipulated threat information	Verification before intrusive actions; ability to correct false records	Human source review, provenance checks, independent case audit *Test:* Blinded false-report exercises, correction and appeal, measurable error rates
TD-06 Emerging capability	Unmanned or remote-enabled disruption	Recognize and communicate hazards without unauthorized interference	Observer reporting, protective procedures, referral to authorized agencies *Test:* Jurisdiction/legal check, low-risk tabletop; no unapproved counter-UAS actions
TD-07 Technology-induced hazard	Unvalidated automated weapons detection	Reliable verification without discriminatory or hazardous escalation	Human-in-loop trials; preserve alternative alerting and emergency decisions *Test:* Pre-registered independent precision/recall, subgroup assessment where lawful, no autonomous force
TD-08 Crosscutting governance risk	Institutional misuse or chilling participation	Independent oversight, lawful limits and trustworthy voluntary participation	Purpose-limited data, complaint channels, separation from enforcement intelligence *Test:* External review, redress timelines, access-log inspection, non-retaliation verification

18.3 A two-speed innovation program

Fast track: discovery and sandbox
Monthly evidence intake, tabletop studies, bench prototypes, accessibility and privacy reviews. Keep experimental systems disconnected from live alarms, access control and personal student records.

Controlled track: life-safety deployment
Site-specific trials only after independent safety, cyber, legal and human-factors reviews. Require reliable manual fallback, rollback, assigned maintenance owner and reviewable consent/data practices.

Conduct quarterly threat/control-gap reviews and immediate review after a credible significant incident, substantiated new attack technique, exploited product vulnerability or material system change. A change in the threat environment can accelerate *assessment*; it cannot waive lawful authority, safe egress or independent validation.

18.4 Decision record, measurement and withdrawal

Each investment requires a **Threat-to-Technology Decision Record**: source and confidence; population and campus exposure; severity and consequence; baseline controls and unmet requirement; alternatives; proposed capability and failure modes; efficacy evidence; false alarms and missed detections; equity/privacy and 2A impacts; OT/cyber dependencies; lifecycle cost; acceptance criteria; named owner; and sunset/reassessment date.

Metrics should include reporting-to-human-review time, protective alert reach and latency in approved exercises, accessible egress outcomes, false positive/negative behavior, offline functionality, staff training coverage, time-to-remediate vulnerabilities, complaint redress, and long-run program participation. Use pre-registered tests and report

uncertainty; never invent a shooting-prevention effectiveness percentage. Compare against the current baseline rather than simply counting installed equipment.

Automatic no-go / suspend. Blocked or nonaccessible egress; autonomous force or unauthorized armed response; uncorroborated personal targeting; coercive firearm-owner disclosure; unexplained disparate treatment; student data transmitted outside legal purpose; compromised alert/control integrity; no safe offline mode; unusable complaint process; or claims of efficacy without adequate evidence. An independent reviewer may stop the pilot.

18.5 Governance, sources and limitations

Threat assessment and adoption boards must include school leadership, independent evaluation, fire and accessibility authorities, the CISO, privacy/civil-rights counsel, family/community representation, and appropriately authorized emergency responders. Separate the vendor from test design and acceptance; publish only non-sensitive aggregate results. Preserve a confidential site-specific annex outside the public repository.

Reference anchors: CISA K-12 School Security Guide (3rd ed., 2022), CISA SSAT, U.S. Secret Service NTAC (2021), NIST CSF 2.0, NIST SP 800-82 Rev. 3 (final, 2023), and CISA K-12 cybersecurity guidance. NIST SP 800-82 Rev. 4 (2026) is a public draft and is not presented as a final standard. All described controls are proposed and **not** site-certified.

19. The promise and limitations of AI for mass-shooting prevention and protection

Decision premise. AI is potentially a useful *defensive force multiplier* for information handling, assurance, training and independent testing. Its role is determined by a documented threat and unmet protective gap; novelty or vendor claims alone do not justify deployment. Published evidence does not establish that AI can reliably predict who will commit a school shooting or independently prevent mass violence. Human accountability, lawful authority and manual life-safety paths remain mandatory.

19.1 Where AI may help across the system

The following opportunities are **proposals to evaluate, not proven school-shooting countermeasures**. A plausible general-purpose AI use does not constitute evidence of effectiveness in an occupied K–12 campus. Every concept must be compared with trained personnel, ordinary software, building improvements and non-technological alternatives.

Concern	Potential AI contribution	Human/safety boundary	Evidence status
AI-01 Child firearm-access prevention	Opt-in educational assistants can explain secure storage, translate caregiver checklists, compare product attributes and answer family questions with verified sources.	Do not identify gun owners, infer household firearms, collect serial numbers, or report participants to law enforcement.	Near-term assistant; protection outcomes unproven
AI-02 Behavioral reporting and assessment	Assist authorized multidisciplinary teams by deduplicating incoming reports, flagging missing context, summarizing cited evidence, and routing urgent human review.	Never generate an offender profile, automated risk score, disciplinary ruling, watchlist, or law-enforcement referral from protected traits, political expression or uncorroborated claims.	Constrained pilot with human decisions
AI-03 Video, acoustic and multi-sensor detection	AI may fuse signals to help a trained operator review possible gunfire or other acute hazards and rapidly check supporting evidence.	Cannot serve as sole basis for lockdown, coercive intervention, identity matching or use of force; record false alarms and environmental drift.	Experimental school-specific performance

Concern	Potential AI contribution	Human/safety boundary	Evidence status
AI-04 Classrooms, barriers and egress	Help audit maintenance records, accessibility, hardware certification, door faults, drill findings and code deviations. Support simulation of safe evacuation options.	AI must never lock students in, independently command access-control hardware, block accessible exits, or override fire-safety systems.	Near-term maintenance support; no autonomous control
AI-05 Canines and specialist detection	Assist handlers with scheduling, welfare monitoring, exercise documentation and aggregate quality assurance of canine teams.	No unsupported claim that AI or canines can predict a shooter. Do not automate animal deployment or treat alerts as guilt.	Administrative support; detection benefit unverified
AI-06 Pre-arrival protective and professional response	Help an authorized human dispatcher assemble verified alerts, accessible occupancy information, and interoperable incident updates.	Never autonomously select targets, authorize force, dispatch coercive action on a model-only finding, or provide automated engagement commands.	Bounded information support; no autonomous force
AI-07 Medical readiness and casualty reduction	Improve training refreshers, inspect bleed-control kit availability, translate instructions, support supply forecasts and approved triage exercises.	Never replace clinical judgment or provide patient-specific autonomous triage in actual emergencies without validated authorization.	Near-term logistics/training; triage research only
AI-08 Cybersecurity and adversarial resilience	Analyze permitted telemetry for anomalous device behavior, prioritize patches, inventory internet-connected school safety equipment, and support supervised incident response.	Treat AI models as attack surfaces: prompt injection, poisoned data, vendor compromise, model drift, and exfiltration. Preserve independent manual life-safety fallback.	Promising SOC support; qualification required
AI-09 Civil rights, accountability and evidence integrity	Support privacy-preserving audits of complaint-handling times, procedural consistency, retention compliance and disparate impacts in aggregate.	No identity-based or ideology-based scoring, secret surveillance, compelled disclosure or unreviewable automated findings.	Administrative analytics with strict guardrails
AI-10 Shared learning and emerging threat analysis	Summarize de-identified after-action findings, map evidence gaps and surface new public research for peer review and controlled updates.	No distribution of exploitable site security information or student PII; AI-generated conclusions require source checking.	Near-term summarization; impact to be evaluated

19.2 A safety case for every AI capability

Human-led, lower-consequence assistance Opt-in educational Q&A; translation; supply and maintenance analysis; public-source synthesis; anonymized after-action summaries. A trained person checks output before any consequential use.

Restricted, higher-consequence applications Student-related threat triage; live sensor fusion; incident alert routing; law-enforcement interfaces; building access; patient information. These demand stronger evidence, documented authority, independent review, and a tested non-AI fallback.

Nondelegable decisions. An AI model cannot determine that an individual is dangerous, impose discipline, initiate a nonconsensual search, disclose protected student records, command confinement, or authorize use of force. AI must never autonomously operate weapons or select targets. Emergency human action remains governed by applicable law, professional standards and demonstrable facts; an AI alert alone is not sufficient.

19.3 Threat-driven qualification and measurement

Step A — State the hazard: Identify the specific, evidence-supported threat and plausible defensive failure. Name the intended use, impacted population and what an adequate non-AI baseline achieves. **Step B — Establish evidence:** Separate vendor demonstrations, general-purpose benchmarks, independent analogous deployments and verified local field tests. Do not equate classification accuracy with violence prevented. **Step C — Sandbox:** Prefer synthetic or genuinely de-identified data and physically isolated simulations, with no live student decisions. **Step D — Controlled pilot:** Allow tightly constrained, overseen pilots only after privacy, student-rights, accessibility, cybersecurity, medical, fire and legal reviews. **Step E — Monitor and revoke:** Revalidate after material model, firmware, threat or environment changes; suspend immediately on a critical safety or rights failure.

Qualification measure	Required evidence	Disqualifying concern
Validity and error	Pre-registered false positives/negatives, calibration, subgroup analysis, dataset shift, uncertainty and human-review latency.	Unbounded false accusations, excessive missed alerts, opaque vendor claims.
Life safety	Manual override, power/network loss, accessible egress and first-responder workflows tested by qualified authorities.	Exit obstruction; autonomous confinement; inability to operate without AI.
Cybersecurity	Supplier provenance, least privilege, adversarial testing, update/rollback plan, logging and compromise-response exercise.	Model compromise with unsafe physical consequence or uncontrolled data access.
Lawful and equitable use	Purpose limitation, FERPA/other applicable law review, appeal/correction, protected-trait impact checks and independent oversight.	Secret profiling, viewpoint-based targeting, unlawful disclosure, denial of redress.
Benefit and proportionality	Incremental improvement versus non-AI baseline, lifecycle cost, operator workload and harm analysis.	No clear safety benefit, unmanageable surveillance or maintenance burden.

19.4 Adversarial co-evolution and model-specific cybersecurity

As defenders adopt automation, attackers may exploit sensors, generate misleading information, contaminate datasets, manipulate language-model inputs, spoof alert pathways or seek unauthorized access to safety infrastructure. The security program must model *both* ordinary system compromise and adversarial-machine-learning mechanisms such as data poisoning, evasion, prompt injection and sensitive-data extraction. AI-assisted cyber monitoring is itself subject to these threats. Public documentation should describe assurance methods without publishing specific campus blind spots, access-control configurations or exploit sequences.

19.5 Civil liberties and the trust required for voluntary cooperation

AI must not transform voluntary firearm-safe-storage outreach into collection of ownership or household data. Threat-management support must focus on corroborated conduct, never demographic or political profiling. Participation data from retailers, shooting organizations and families must remain segregated from law-enforcement intelligence except where independently supported lawful disclosure is necessary. FERPA and other applicable privacy law constrain student-record access and redisclosure. A documented human appeal, correction mechanism and genuinely independent complaint channel are prerequisites for high-impact use.

19.6 90-day research and evaluation agenda

Days 0–30 · Baseline and governance

Choose no more than three low-consequence candidate applications (e.g., opt-in secure-storage educational content, maintenance analytics, and de-identified research summaries). Create data-flow diagrams, identify the legal basis and accessible alternative, recruit independent reviewers and pre-register evaluation endpoints. Do not ingest identifiable student or ownership records.

Days 31–60 · Red-team and comparative exercises

Compare AI-supported performance to trained human/ordinary software baselines using synthetic or approved data. Test hallucinations, subgroup error, false alarms, adversarial prompts, outages and operator overreliance. Log all critical failures, fix or abandon failed applications, and document the need for human verification.

Days 61–90 · Publication decision

Independent evaluator issues continue / modify / discontinue decisions for each low-risk pilot. Release aggregate findings, limitations and costs without sensitive site information. Any proposal touching live alerts, door controls, individual assessments or use of force must enter a separate higher-assurance process; 90 days alone cannot certify that use.

19.7 Source register and evidence limits

1. NIST AI Risk Management Framework 1.0 — Valid/reliable, safe, secure/resilient, privacy, fairness, explainability and accountability.
2. NIST Generative AI Profile (AI 600-1) — GenAI-specific evaluation and controls.
3. NIST Adversarial Machine Learning 2025 — Evasion, poisoning, privacy attacks and model abuse.
4. USSS NTAC, Enhancing School Safety — No reliable student attacker profile; emphasize behaviors and human threat assessment.
5. CISA K-12 School Security Guide — Campus-specific, layered assessment; technology is only one element.
6. Department of Education FERPA FAQ on threat teams — Purpose limitations and restrictions on redisclosure of education records.
7. NIST Cybersecurity Framework — Govern, identify, protect, detect, respond and recover.

Public-research limitation: These are prospective applications and evaluation requirements, not tested performance claims or legal advice. AI capabilities and legal requirements change; formal district deployment requires up-to-date source review, authorization and independent on-site validation. Release: Version 17.0 Revision 1 Version 17.0 Revision 1 (scenario-specific engineering update), 26 October 2026.

20. Specific threat scenarios, safeguards and qualification

Version 17.0 Revision 1 engineering objective. Translate general prevention and response recommendations into observable threat conditions, proportionate protective actions, accountable owners, measurable test results and explicitly prohibited failure modes. This is a public non-tactical specification: deployment-ready plans require confidential local appendices and independent authority review.

Evidence hierarchy. Legal/code obligation ≠ demonstrated shooting-outcome effect. Established prevention mechanisms, professional guidance, tested components and speculative technologies must be labeled separately. Success in a tabletop or pilot is not proof of casualty reduction.

20.1 Defensive process

Observe & corroborate → classify urgency → choose the least harmful effective safeguard → verify human authority → test the control → record results → improve or withdraw. Do not equate lawful firearm ownership, an identity category, protected expression or an AI score with an individualized threat.

20.2 Scenario-based protective requirements

T01 · Household firearm accessible to a minor

Observable condition: Caregiver identifies an unlocked firearm or accessible key/code. **Defensive control:** Voluntary locked and unloaded storage guidance; protect combinations; discounted safe or lock referral. **Owner:** Community firearm-safety lead. **Test:** Anonymous opt-in adoption survey, lock voucher accounting, and caregiver comprehension exercise. **Stop:** Ownership reporting required or security intervention based solely on ownership.

T02 · Firearm in relatives', friends', or shared-care locations

Observable condition: Caregiver concern about access during visits or custody transitions. **Defensive control:** Universal caregiver discussion guide; voluntary peer-to-peer secure-storage conversation; translated materials. **Owner:** Family engagement coordinator. **Test:** Usability test with volunteer caregivers across household types. **Stop:** Program conditions school access on parental ownership disclosure.

T03 · Unsecured firearm left in a vehicle

Observable condition: Voluntary report that firearm was previously left accessible in a vehicle. **Defensive control:** Avoid unattended vehicle storage; voluntary locked storage education; lawful temporary storage referrals. **Owner:** Community retailer and caregiver network. **Test:** Anonymized scenario questionnaire and program distribution audit. **Stop:** Law-enforcement vehicle search derived from education enrollment data.

T04 · Credible communicated threat or planning leakage

Observable condition: Specific observed statements or behavior with corroborating context. **Defensive control:** Multidisciplinary, behavior-based assessment; documented corroboration; supportive interventions; emergency referral only where justified. **Owner:** School threat assessment chair. **Test:** Tabletop case review with synthetic facts and independent review of proportionality. **Stop:** Unsupported coercion or unsupported record transfer.

T05 · Malicious, mistaken, or uncorroborated accusation

Observable condition: Anonymous allegation lacking independently corroborated conduct. **Defensive control:** Separate intake from finding; preserve exculpatory information; corrective review, time limits and appeals. **Owner:** Civil rights officer / independent reviewer. **Test:** Synthetic false-report exercise with review by legal and student representatives. **Stop:** Student punishment, political profiling or irreversible label without support.

T06 · Suspected weapon or violence near school arrival/access area

Observable condition: Direct human report of potential weapon or danger, not algorithmic inference alone. **Defensive control:** Trained human confirmation where safe; dispatch escalation; campus-specific protective action; accessible notification. **Owner:** School incident commander / 911 dispatch. **Test:** No-live-weapon notification tabletop; measure decision and alert chain. **Stop:** Protective action depends entirely on a network sensor or unvalidated classifier.

T07 · False or missed acoustic/visual firearm alarm

Observable condition: Sensor activates without verified incident, or misses simulated signal. **Defensive control:** Independent sensor benchmark; source provenance; human verification; alternate reporting channel. **Owner:** Technology assurance lead. **Test:** Controlled authorized synthetic tests, blinded false-positive and false-negative assessments. **Stop:** Vendor cannot disclose validation data; false alerts trigger irreversible action.

T08 · Threat reported while groups are in hallways or common areas

Observable condition: Verified immediate threat with mixed locations and conflicting movement instructions. **Defensive control:** Preplanned options-based training; intelligible multi-channel guidance; trained staff judgement. **Owner:** Emergency preparedness lead. **Test:** Accessible, non-violent exercise with multiple mobility profiles and observers. **Stop:** Single inflexible command unnecessarily exposes or traps occupants.

T09 · Classroom door hardware fails or impedes egress

Observable condition: Routine inspection finds fault, incompatible accessory, or emergency release failure. **Defensive control:** Code-reviewed listed hardware; scheduled inspection; manual opening and release; accessibility testing. **Owner:** Facilities / fire code authority. **Test:** Qualified walk-through under power-off and simulated panic conditions. **Stop:** Any tested exit obstruction or inability to release from inside.

T10 · Person with disability cannot perceive or follow protective instruction

Observable condition: Audible-only alert or obstructed accessible exit. **Defensive control:** Multimodal accessible alerts, individualized support planning, accessible refuge/egress review. **Owner:** ADA/504 coordinator. **Test:** Inclusive drill with disabled participants and voluntary accommodations. **Stop:** Protective protocol excludes or isolates disabled occupants.

T11 · Power or communications outage during incident

Observable condition: Loss of power, WAN, cellular, or security control unit. **Defensive control:** Tested backup power; manual public address / radio alternatives; fail-safe access and written procedures. **Owner:** Facilities / IT / incident command. **Test:** Authorized loss-of-power functional test with observer and fire authority. **Stop:** Any power loss locks an occupied exit or disables all emergency notification.

T12 · Spoofed alert, ransomware, or compromised access-control system

Observable condition: Unexpected vendor login, unsigned command, inconsistent emergency message. **Defensive control:** MFA; least privilege; segmentation; signed updates; manual override; offline incident playbook. **Owner:** CISO / physical security owner. **Test:** Authorized tabletop and isolated cyber-physical failure injection (no live student impact). **Stop:** Remote operator can close all egress or issue unverified lethal-threat instructions.

T13 · Life-threatening bleeding before EMS arrival

Observable condition: Observed injury requiring immediate emergency medical response. **Defensive control:** Bleeding-control kits, trained personnel, accessible cache locations, EMS handoff coordination. **Owner:** School nurse / EMS liaison. **Test:** Skills-based medical training and equipment inspection; coordinate with qualified clinicians. **Stop:** Kits inaccessible or training not sustained.

T14 · Delayed police arrival during an active threat

Observable condition: Dispatch acknowledges incident but units are not yet on scene. **Defensive control:** Protective actions, verified alarms, trained communications lead, EMS staging; only legally authorized professional security with oversight. **Owner:** District emergency lead / law enforcement agency. **Test:** Multi-agency tabletop; timed non-weapon exercise; authority and ID checks. **Stop:** Unqualified staff armed or force authority delegated to software.

T15 · Canine false indication, injury, or unreliable deployment

Observable condition: Canine proposed for explosives/firearms screening or a positive indication occurs. **Defensive control:** Qualified canine/handler credentialing; validated application-specific reliability; welfare and student safety review. **Owner:** Canine program supervisor / independent evaluator. **Test:** Double-blind controlled screening trials; documented incident review. **Stop:** Insufficient canine validation or foreseeable student bite/exposure risk.

T16 · Misidentified person or unauthorized on-site use of force

Observable condition: Confusing observations; responder has incomplete incident picture. **Defensive control:** Qualified law-enforcement coordination; identification and restraint standards; independent force review; medical response. **Owner:** Authorized law enforcement / independent oversight. **Test:** Legal policy review, credentials audit and scenario-based decision exercise without weapons. **Stop:** Unlawful force policy; missing chain of command or independent review.

T17 · AI-generated accusation, synthetic media, or automated threat score

Observable condition: Suspicious synthetic audio/video or automated recommendation presents urgent allegation. **Defensive control:** Source verification, human case review, multiple independent observations and challenge process. **Owner:** AI assurance officer / threat team. **Test:** Adversarial synthetic exercise, subgroup error analysis and documentation review. **Stop:** Model recommendation is treated as proof or enables automatic police action.

T18 · After-event reunification confusion or sensitive-data leakage

Observable condition: Families receive contradictory or over-detailed status messages. **Defensive control:** Single authorized family information lead, secure verification, accessible multilingual updates. **Owner:** Reunification coordinator / privacy officer. **Test:** Family-facing tabletop, multilingual review, redacted communication audit. **Stop:** Live roster exposed or misinformation uncontrolled.

20.3 Five cross-cutting qualification gates

1. **Necessity:** identify a documented threat, exposed population and unmet protective gap; consider low-tech alternatives.
2. **Protection:** demonstrate plausible benefit and measure alert delay, errors, accessibility and secondary hazards.
3. **Rights:** document lawful authority, FERPA restrictions, nondiscrimination, due process, community input and complaint mechanisms.
4. **Cyber-resilience:** validate vendor access, updates, segmentation, identity controls, offline fallback and incident response.
5. **Independent acceptance:** a board-designated evaluator documents objective evidence and approves, restricts, suspends or rejects the capability.

20.4 Release and decision authority

Publish only de-identified scenarios and aggregated validation outcomes. Withhold detailed campus maps, physical bypass or penetration methods, school-specific timing diagrams, sensitive credentials, identities of threat reporters and student case materials. A district safety director cannot override a fire authority's egress determination; procurement staff cannot waive privacy/constitutional gates; AI and sensors cannot authorize physical force.

20.5 Practical first 90 days

Days 1–30: audit baseline readiness and rights, collect incident categories, map owners and missing documentation. **Days 31–60:** run non-violent synthetic tabletop/functional tests for accessible alerts, outage release and false reports. **Days 61–90:** independently examine results; adopt low-regret measures, remediate failures and initiate separately authorized research pilots for unvalidated technologies. No 90-day plan constitutes field certification of life-safety equipment or armed response.

20.6 Supporting materials

See the separate *Threat Scenario and Countermeasure Engineering Specification, Version 17.0 Revision 1*; its machine-readable JSON/CSV registers are the controlling source for identifiers, test steps, responsible owners and deployment-stop rules. Legal and factual references are recorded in the source register.

21. Verifiable advisory reasoning

The companion engine evaluates declarative Boolean rules over approved anonymous assertions. It keeps logical results separate from source currency and institutional authority. Missing facts remain unknown; matching assertions are not authenticated evidence.

Each assessment identifies the engine and knowledge versions, the knowledge SHA-256, accepted Boolean assertions, predicate outcomes, and a rule-by-rule reasoning certificate. A separate Python checker replays the result against the original request and a trusted knowledge bundle. This detects altered verdicts or substituted assertions; it does not prove that an assertion is true or certify a school.

Agents must preserve the structured result and disclose missing facts and source-review limitations. Generated prose cannot change rule verdicts. Unreviewed, conflicting, withdrawn, or expired sources require human review. The default assessment date is the frozen knowledge reference date; an explicit date is required when current source status matters.

The supported constraint language is specified in the public reasoning contract. It provides six advisory outcomes: not applicable, unknown scope, needs evidence, assertions match, gap for review, and deployment hold. There are no autonomous enforcement or equipment-control actions.
